TALMY'S MOTION TYPOLOGY

Spanish (verb-framed)

La botella **entró** a la cueva **flotando**
the bottle **moved.in** to the cave **floating**
PATH **MANNER**

Talmy (1985: 69)

Dutch (satellite-framed)

De fles **dreef** de grot **in**
the bottle **floated** the cave **into**
MANNER **PATH**

'The bottle floated into the cave'

The Many Ways to Search for a Frog
Linguistic Typology and the Expression of Motion Events

MOTION ENCODING STRATEGIES

satellite-framed:	Alice laughed so much at this, that she had to run back into the wood for fear of their hearing her;
verb-framed:	she had to enter the wood running / at a run / quickly
path-only:	she had to enter the wood
manner-only:	she had to run in the wood
deictic:	she had to go into the wood
coordination:	she had to run and go back into the wood
subordination:	she had to run to go back into the wood
manner+path verb:	she had to run+enter the wood
other:	she was in the wood

PRINCIPAL COMPONENT ANALYSIS

65% of the variance is explained by the first principal component

Take the score of each language on the first principal component

TESTING HISTORICAL SIGNAL

Phylogenetic trees:

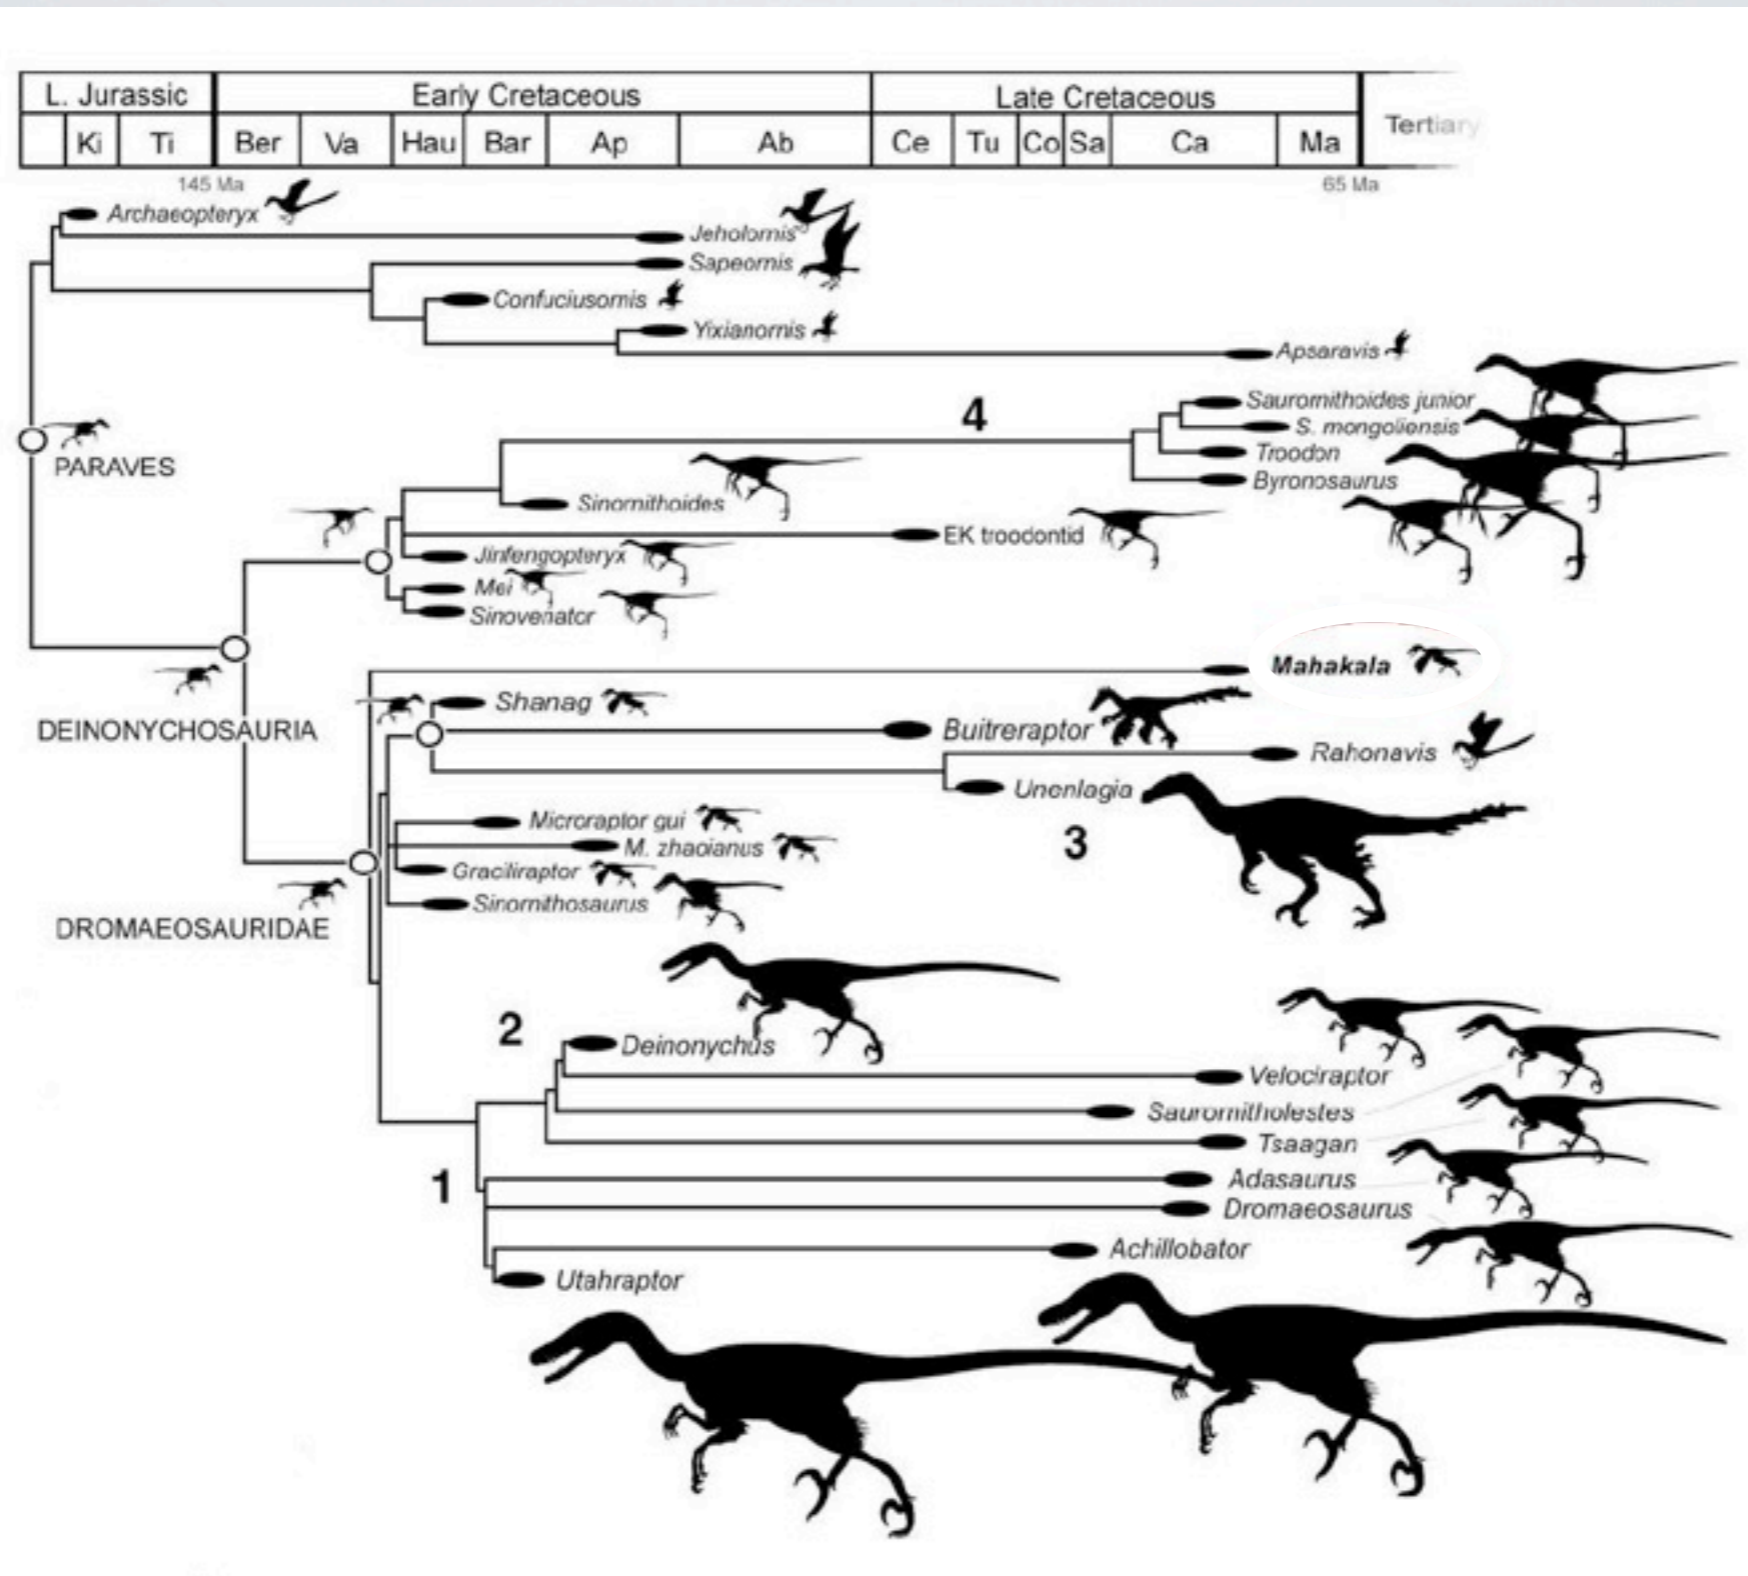

- from Dunn et al. (2011)
- build on lexical data (Swadesh lists)
- estimated using a Bayesian Markov Chain Monte Carlo approach

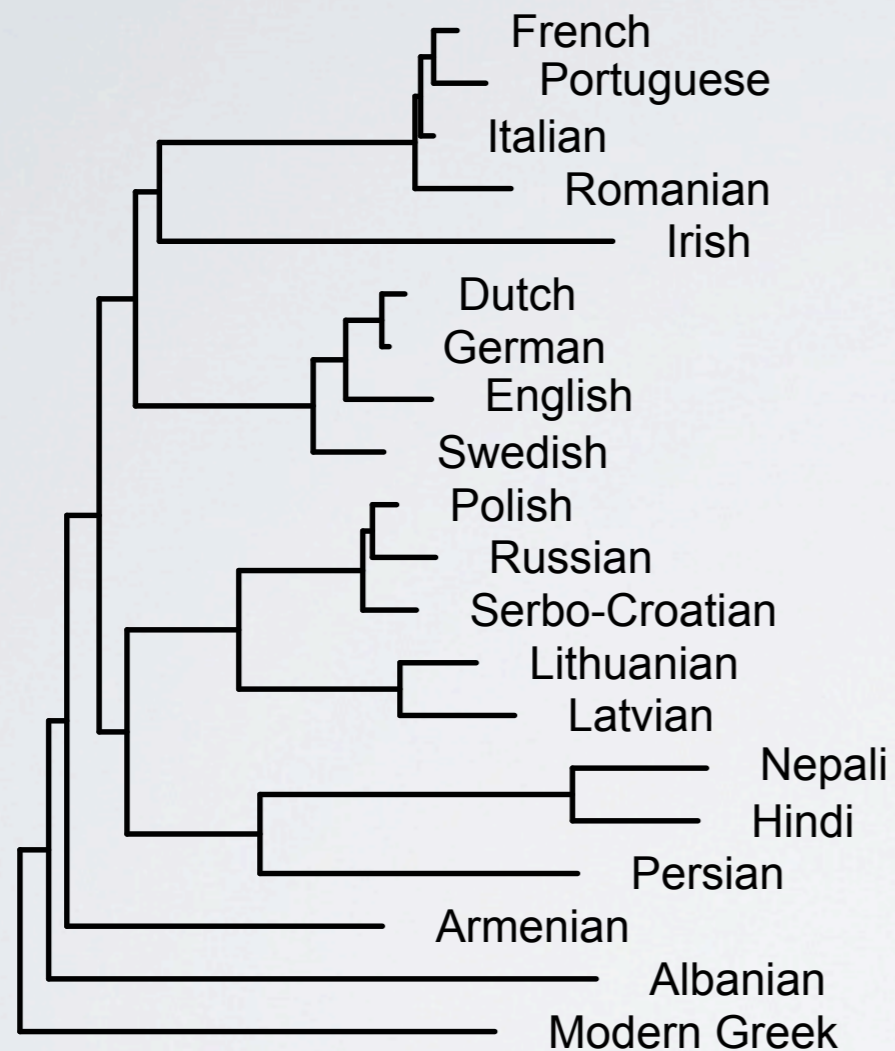

DATA + TREES

HISTORICAL SIGNAL

TESTING HISTORICAL SIGNAL

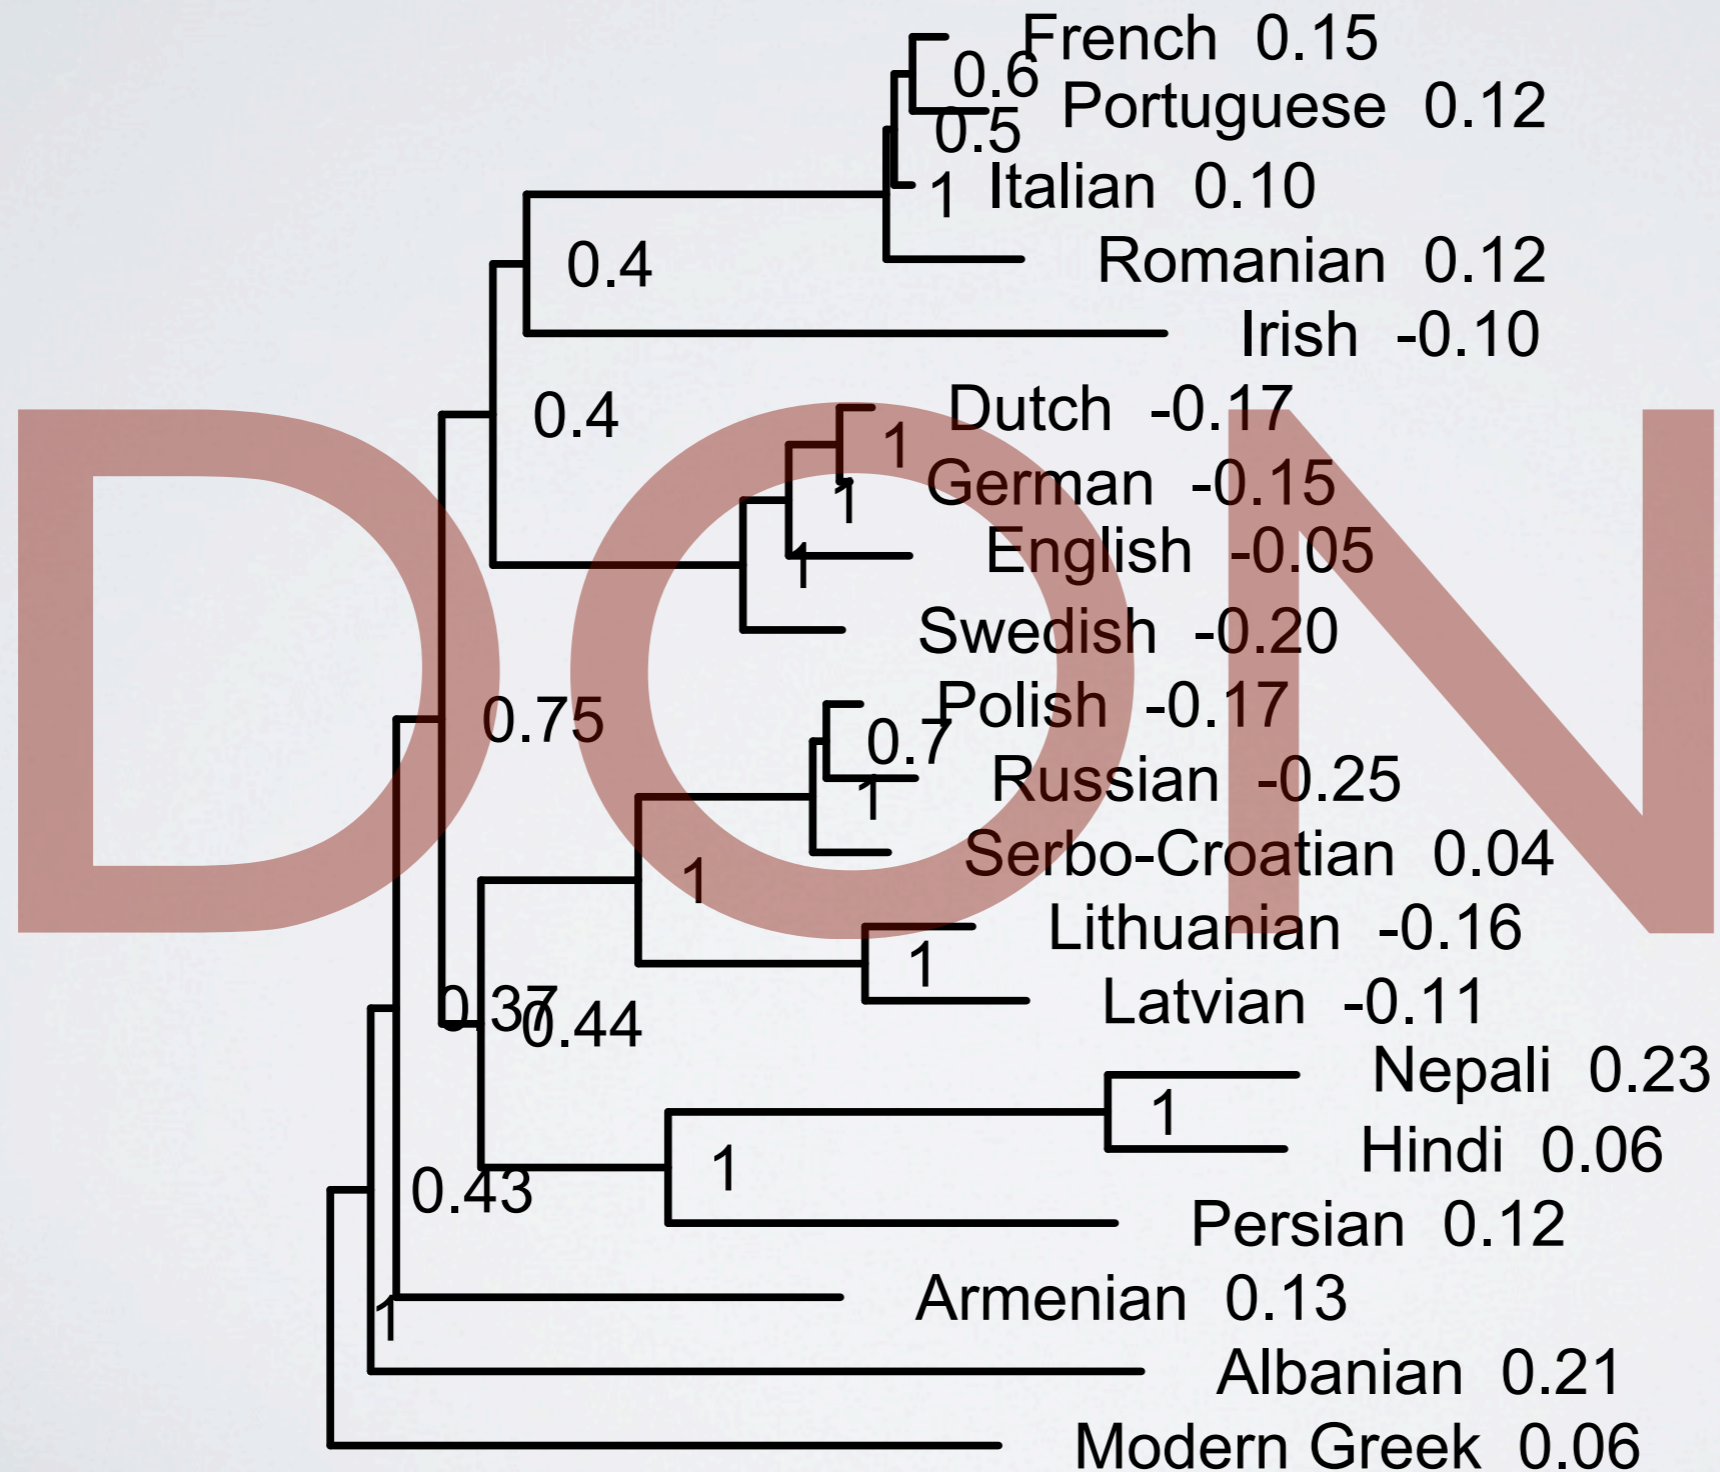

the likelihood of real trees is significantly different from likelihood of trees with zero lambda ($p < 0.01$)

TESTING HISTORICAL SIGNAL

the kappa score provided by this analysis shows that historical signal is present

CORRELATED EVOLUTION

CONCLUSION

An approach to motion events that takes into account patterns of usage gives us a more fine-grained and productive perspective

Patterns of motion encoding diversity are not random but historically patterned, and comparative analysis needs to take this into account

In order to take into account this history we need ways to combine traditional historical linguistic methods with phylogenetic comparative methods

Thank you!
