## Part I: Experimental Part:

## General Information

Unless otherwise stated, all glassware was oven dried and all reactions were carried out under an argon atmosphere using standard schlenk techniques. Dried acetonitrile was purchased from Acros Organics, and was stored under Argon. All commercially available reagents were purchased from Acros Organics, Alfa Aesar, Fluka AG or Sigma Aldrich and were used without further purification. Beta-Ketoesters ${ }^{1}$ and unsaturated carboxylic acids ${ }^{2}$ were prepared according to literature methods. Reaction progress was monitored by thin layer chromatography (TLC) performed on plastic plates coated with silica gel $\mathrm{F}_{254}$ with 0.2 mm thickness. Visualization was achieved by ultraviolet light ( 254 nm ). Flash column chromatography was performed using silica gel 60 (230-400 mesh, Merck and co.). Neat infra-red spectra were recorded using a Perkin-Elmer Spectrum 100 FT-IR spectrometer. Wavelengths (v) are reported in $\mathrm{cm}^{-1}$. Mass spectra were obtained using a Finnigan MAT 8200 or $(70 \mathrm{eV})$ or an Agilent $5973(70 \mathrm{eV})$ spectrometer, using electrospray ionization (ESI). All ${ }^{1} \mathrm{H}$ NMR and ${ }^{13} \mathrm{C}$ NMR spectra were recorded on a Bruker AV-500 $\left({ }^{1} \mathrm{H}: 500.4 \mathrm{MHz} ;{ }^{13} \mathrm{C}\right.$ : $125.8 \mathrm{MHz})$ or on a Bruker DPX $300\left({ }^{1} \mathrm{H}: 300.1 \mathrm{MHz} ;{ }^{13} \mathrm{C}: 75.5 \mathrm{MHz}\right)$. All spectra were recorded in $\mathrm{CDCl}_{3}$, chemical shifts were given in parts per million (ppm, $\delta$ ), referenced to the peak of tetramethylsilane, using the solvent as internal standard ( $\mathrm{CDCl}_{3}:{ }^{1} \mathrm{H}: 7.26 \mathrm{ppm},{ }^{13} \mathrm{C}$ : $77.16 \mathrm{ppm})^{3}$. Coupling constants were quoted in $\mathrm{Hz}(J) .{ }^{1} \mathrm{H}$ NMR Spectroscopy splitting patterns were designated as singlet (s), doublet (d), triplet ( t ), quartet ( q ), pentet (p), septet (se), octet (o). Splitting patterns that could not be interpreted or easily visualized were designated as multiplet ( m ) or broad (br).

## $\alpha$-Functionlisation of carbonyl compounds:

## General Procedure for the $\boldsymbol{\alpha}$-functionalisation of ketones:

A suspension of ketone ( 0.5 mmol ), methyl phenyl sulfoxide ( $70.7 \mu \mathrm{l}, 84.1 \mathrm{mg}, 0.6 \mathrm{mmol}$ ), trimethylsilyl trifluoromethansulfonate ( $135.8 \mu 1,166.6 \mathrm{mg}, 0.75 \mathrm{mmol})$ and the corresponding sodium halide ( $35.1 \mathrm{mg}, 0.6 \mathrm{mmol}(\mathrm{NaCl}) ; 62.2 \mathrm{mg}, 0.6 \mathrm{mmol}(\mathrm{NaBr})$ ) in acetonitrile ( 1 ml ) was stirred for the mentioned time. The mixture was subsequently hydrolysed with water ( 10 ml ), extracted with methyl tert-butyl ether ( $3 \times 10 \mathrm{ml}$ ) and dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$. The resulting solution was evaporated in vacuo, and the crude product was purified by column chromatography on silica gel.

## Large Scale preparation of 4a:

A suspension of ethyl 2-oxocyclohexanecarboxylate ( $10 \mathrm{mmol}, 1.70 \mathrm{~g}, 1.61$ $\mathrm{ml})$, methyl phenyl sulfoxide ( $12 \mathrm{mmol}, 1.68 \mathrm{~g}, 1.41 \mathrm{ml}$ ) and $\mathrm{NaCl}(12$ mmol, 0.70 g ) in acetonitrile ( 20 ml ), was treated with trimethylsilyl trifluoromethansulfonate ( $15 \mathrm{mmol}, 3.33 \mathrm{~g}, 2.72 \mathrm{ml}$ ). Column chromatography over silica using $i$-hexane : ethyl acetate $30: 1$ as eluent afforded the title compound as colourless oil $(\mathrm{Rf}=0.07 ; 1.84 \mathrm{~g}, 8.99 \mathrm{mmol}, 89 \%)$.

## Bromolactonisation:

## General Procedure for the bromolactonisation

Subsequent dropwise addition of cyclisation precursor ( 0.5 mmol ) yielded a colorless solution that was stirred until the formation of bromine, colour change to yellow, indicates the end of the reaction. The resulting solution was hydrolised with a $5 \% \mathrm{NaHCO} 3-$ solution ( 10 ml ), and extracted with ethyl acetate ( 3 x 10 ml ). The combined organic layers were dried over Na2SO4, and evaporated in vacuo. Further purification was carried out by colomn chromatography on silica gel, to yield the desired product.
