

Content

1 Multiangle Photon Correlation Spectroscopy in Particle Characterization (R. Xu)	1
1.1 Introduction	1
1.2 Theoretical Background	1
1.3 Multiangle PCS Measurement	9
1.4 Acknowledgement	17
1.5 References	17
2 Possibilities and Limitations of Laser Light Scattering Techniques for Particle Size Analysis (I. Zimmermann)	19
2.1 Scattering by a Single Particle	19
2.2 Scattering by Collective Samples	22
2.3 Discussion	26
2.4 References	26
3 Improvements in Particle Size Analysis Using Light Scattering (R. Xu)	27
3.1 Introduction	27
3.2 Angular Light Scattering Intensity	29
3.3 Improvements in Submicron Size Analysis	41
3.4 PIDS Instrumentation and Data Analysis	50
3.5 Summary	54
3.6 Appendix	55
3.7 References	55
4 Particle Sizing in the Sub-micron Range by Laser Diffraction (M. Wedd)	57
4.1 Introduction	57
4.2 What is Refractive Index?	63
4.3 Data Inversion	64
4.4 Calculation of Volumetric Concentrations and Specific Gravities	65
4.5 Practical Results	66
4.6 References	67
5 A Guide to the Validation of Laser Diffraction-based Particle Size Analysers (M. Wedd)	69
5.1 Introduction	69
5.2 The Regulatory Environment Structure	69

5.3 The Concept of Validation	73
-------------------------------------	----

6 Confocal Laser Scanning Microscopy and its Application in Liposomal Research (T. Möller)	85
---	-----------

6.1 Summary	85
6.2 Introduction	85
6.3 Principles of Confocal Microscopy	86
6.4 Resolution	88
6.5 Lasers	91
6.6 Dyes	92
6.7 Limits of Confocal Microscopy	92
6.8 Applications of Confocal Microscopy	94
6.9 Further Readings	98
6.10 References	98

7 Introduction to Atomic Force Microscopy and its Application to the Study of Lipid Nanoparticles (E. zur Mühlen, H. Niehus)	99
---	-----------

7.1 Introduction - Traditional Microscopy Techniques	99
7.2 Introduction - Scanning Probe Microscopy	101
7.3 Imaging Mechanism of STM	102
7.4 Forces Acting between Probe and Sample	105
7.5 Contact-AFM: Topography Imaging	109
7.6 Contact-AFM: Lateral Force Microscopy (LFM)	115
7.7 Contact-AFM: Force-Distance Curves	117
7.8 Contact-AFM: Scanning Force Spectroscopy (SFS)	121
7.9 Non-Contact AFM	122
7.10 Conclusion	126
7.11 References	127

8 FTIR Techniques for Surface Characterization (A. Büchtemann, R. Dietel)	129
--	------------

8.1 Introduction	129
8.2 Basic Information on Infrared Spectroscopy	130
8.3 Transmission Spectroscopy	133
8.4 Reflection Spectroscopy	138
8.5 References	154

9 Circular Dichroism (CD) for the Analysis of Dissolved and Adsorbed Proteins (H. Hermel)	159
--	------------

9.1 General Remarks	159
9.2 Origin of Absorption and Dispersion	161

9.3	Poly-L-lysine CD, a Standard for the Secondary Structure	162
9.4	Problems of CD-investigations of Adsorbed Proteins	162
9.5	In situ Measurements of Adsorbed Protein Layers at the Fluid Interface.....	164
9.6	References.....	168

10 The Surface Structure of Lipid Drug Carriers - Influence on Carrier-Cell Interaction (L. Bergelson, A. Domb).....169

10.1	The Heterogeneity of the Lipid Particle Surface	169
10.2	Methods to Study Lipid Surface Structure	171
10.3	Influence of Proteins and Peptides on the Surface Structure of Lipid Drug Carriers	177
10.4	Influence of Drug Loading on the Carrier Surface	178
10.5	References.....	181

11 Surface Area Analysis of Finely Divided and Porous Solids by Gas Adsorption Measurements (T. Schoofs).....185

11.1	Introduction.....	185
11.2	Fundamental Understanding of Surface Area.....	185
11.3	Characterisation Methods	187
11.4	Physical Adsorption of Gases	189
11.5	The Adsorption Process.....	190
11.6	Determination of Surface Area	193
11.7	Practical Measurement	195
11.8	References.....	197

12 Determinations of Surface Area in Comparison (H. Winter).....199

12.1	Sample Preparation - Single-point- and B.E.T. - Multi-point Measurement	199
12.2	Preparation of the Samples	200
12.3	Choosing of the Adsorbate Gas	201
12.4	Conclusions.....	201
12.5	Description of the Measurement Results.....	202
12.6	Test 18 and 19	206
12.7	Summary	207
12.8	References.....	208

13 The Surface Area of Magnesium Stearate: An Example for a Complex Analysis Task (F. Metz).....209

13.1	Introduction	209
13.2	Considerations for Small Surface Areas.....	209
13.3	Sample Preparation Considerations	211

13.4 Analysis of Commercial Magnesium Stearates	212
13.5 Conclusion	213

14 Surface Hydrophobicity - Determination by Rose Bengal (RB) Adsorption Methods (R.H. Müller).....215

14.1 Importance of Hydrophobicity of Particles and Surfaces for Physical and Biological Interactions	215
14.2 The Basic Problem of Measuring Surface Hydrophobicity	217
14.3 Rose Bengal Binding Methods	218
14.4 Summary	226
14.5 References.....	227

15 Theory and Set Up of Hydrophobic Interaction Chromatography (HIC) (K. Thode, R.H. Müller).....229

15.1 Theory of HIC.....	229
15.2 Running HIC	231
15.3 Running Mini - HIC	232
15.4 References.....	233

16 Hydrophobic Interaction Chromatography (HIC) for Determination of the Surface Hydrophobicity of Particulates (R.H. Müller).....235

16.1 General Applications of HIC	235
16.2 Experimental	235
16.3 Characterization of Polystyrene Latex Particles with Different Functional Surface Groups	237
16.4 HIC of Polymeric Particles Surface-modified by Polymer Adsorption	241
16.5 Application of HIC to Differently Sized Nanoparticles, Emulsions and Liposomes	246
16.6 Summary	248
16.7 References.....	249

17 HIC of Iron Oxide Dispersions Stabilized by Different Macromolecules (K. Thode, M. Kresse, R.H. Müller).....251

17.1 Introduction.....	251
17.2 Choice of the Appropriate Wavelength.....	252
17.3 Running Mini-HIC of Iron Oxide Dispersions	255
17.4 Conclusions.....	259

18 Two-Dimensional Polyacrylamide Gel Electrophoresis (2-D PAGE) for the Analysis of Protein Adsorption onto Surfaces (T. Blunk)	261
18.1 Why 2-D PAGE for the Analysis of Protein Adsorption?	261
18.2 How to Do the Analysis?.....	262
18.3 What to Expect from 2-D PAGE? - A Study of Kinetics of Protein Adsorption as an Example.....	268
18.4 Conclusion	272
18.5 References.....	273
18.6 Abbreviations	275
19 Index.....	277
