Supplementary Table 3

iBAQ quantitative mass spectrometry analysis of Cas7 co-purification. Proteins listed were confidently identified and quantified in 3/3 replicate analyses. For the UPS2 standard proteins, nominal amounts in 1 µg standard were used to derive a calibration curve (double logarithmic plot (log(iBAQ) vs. log(amount), Suppl. Fig. x). iBAQ values are averaged from three replicates. Cas5-7 concentrations were calculated using the log/log linear regression $y = 0,8932x + 1,3344$.
