## I. Synthesis and Matrix Isolation of the Benzylperoxy Radical 2

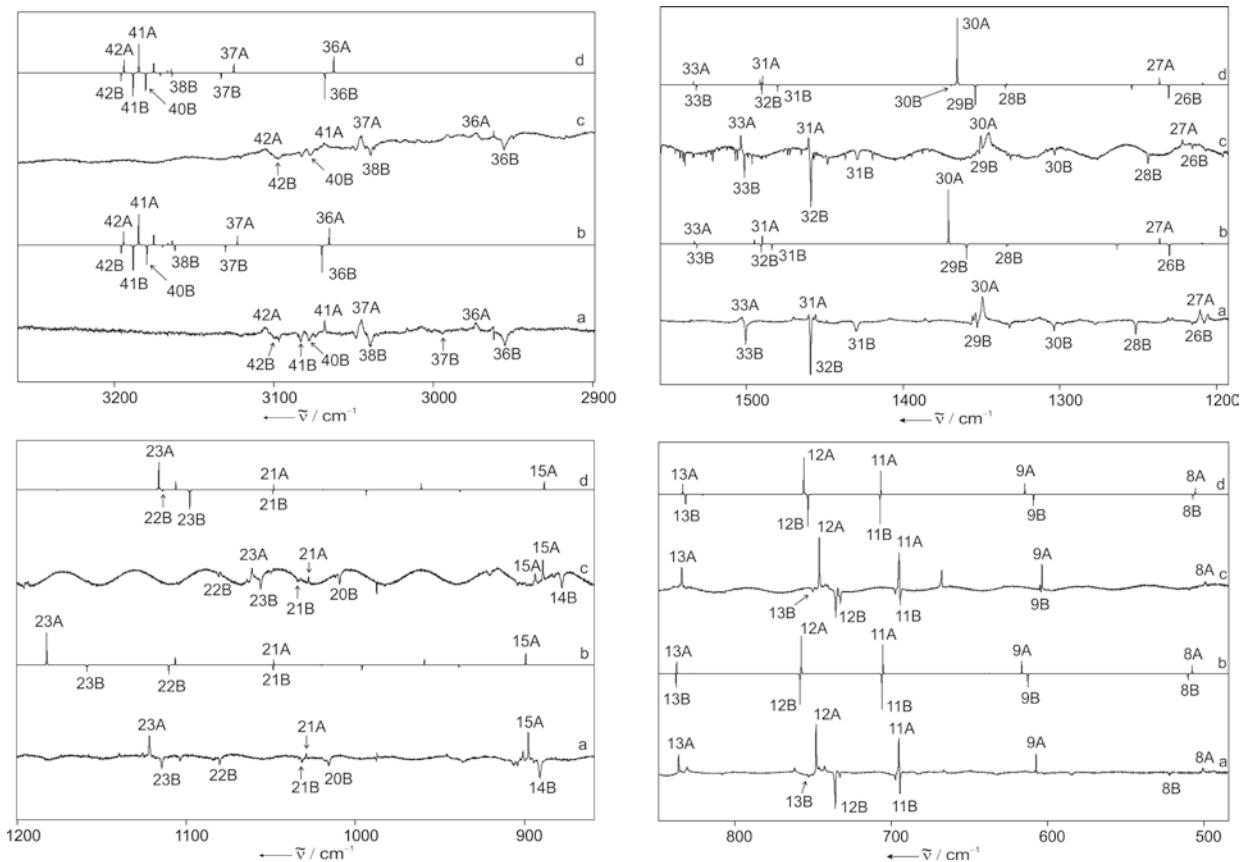

**Figure S1.** IR spectra showing the generation of radical **1** and  $d_2\text{-}1$  in argon. (a) IR spectrum obtained after trapping the FVP products of **3** in argon at 3 K. (b) IR spectrum obtained after trapping the FVP products of  $d_4\text{-}3$  in argon at 3 K. Peaks marked with (\*) belong to the precursors **3** and  $d_4\text{-}3$ , respectively.

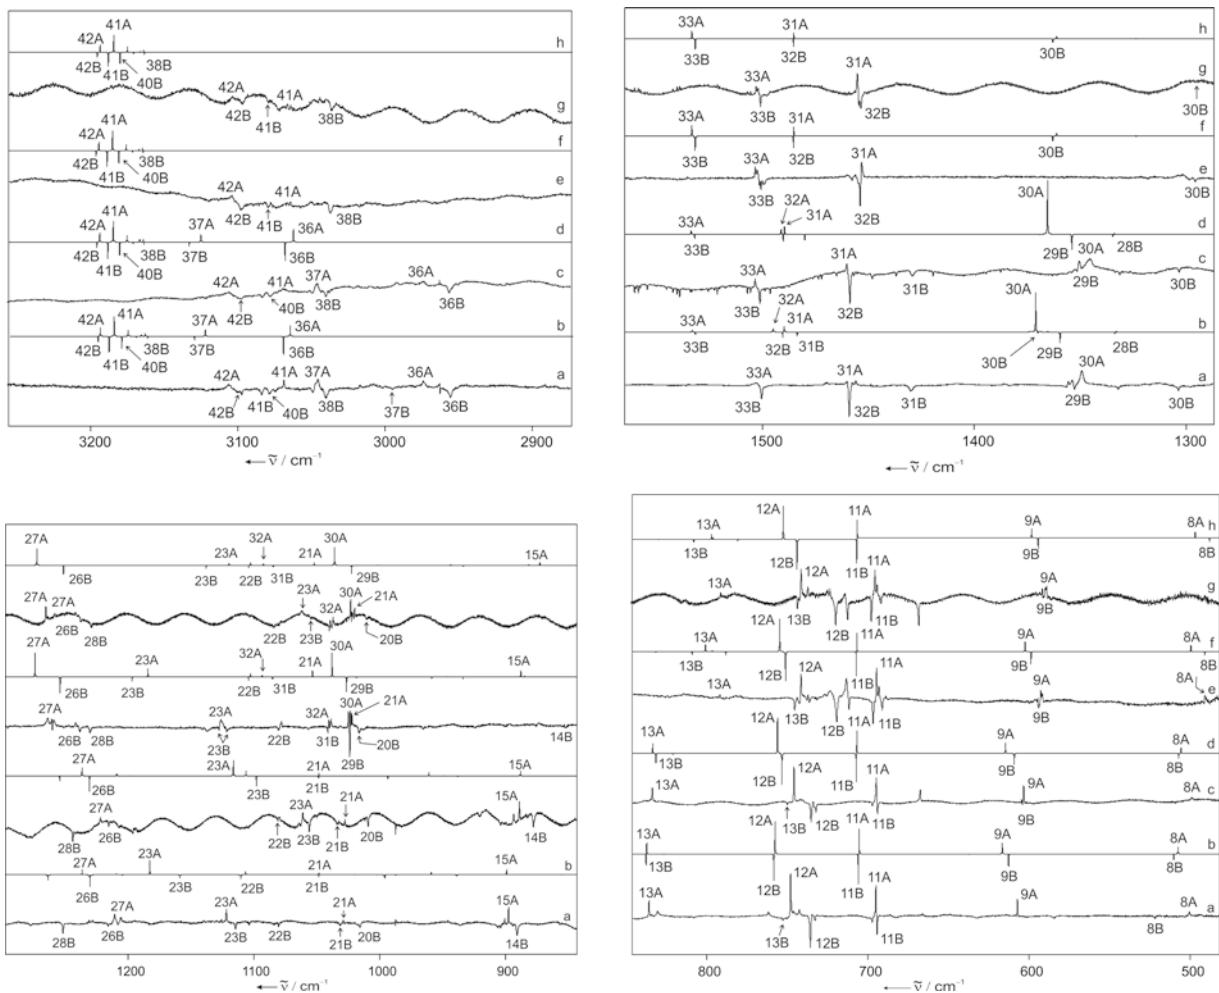

**Figure S2.** Annealing of the benzyl radical **1** in a 0.5%  $O_2$ -doped argon matrix at 3 K. (a) IR spectrum obtained after trapping the FVP products of **3** in a 0.5%  $O_2$ -doped argon matrix at 3 K. (b)-(d) Annealing of matrix (a) at temperatures of 20, 25, and 30 K, respectively. (e) Spectrum after annealing up to 30 K followed by cooling down to 3 K.

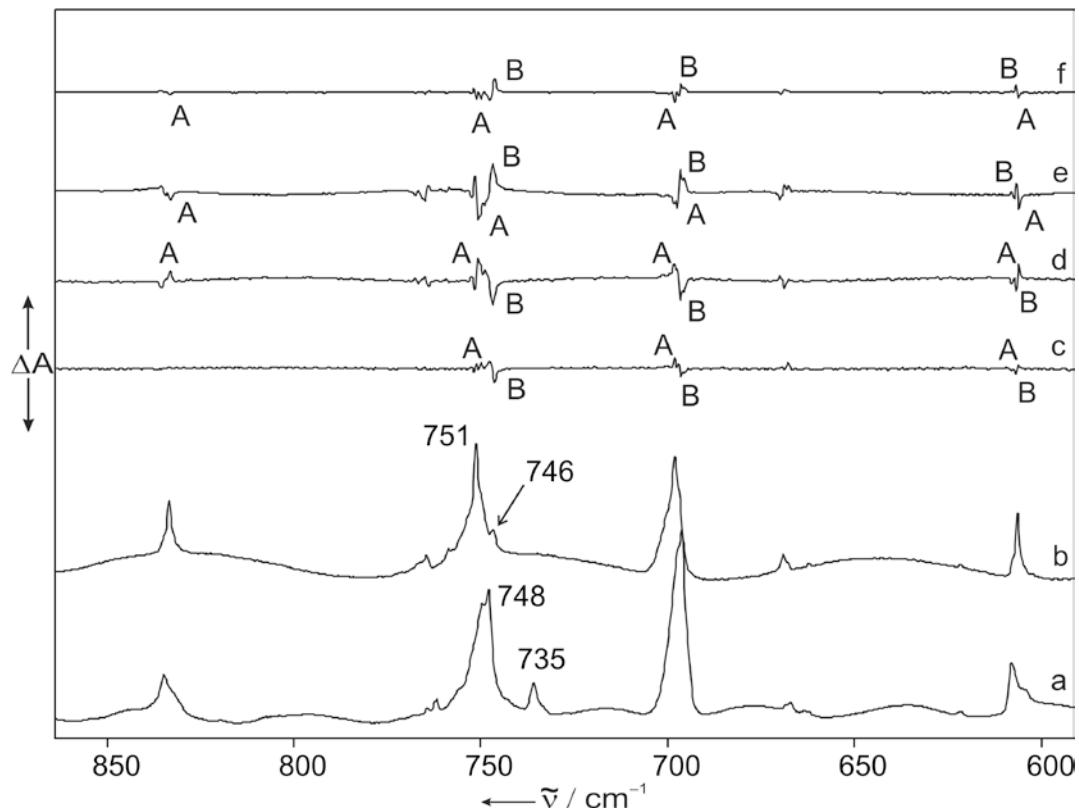

**Figure S3.** a) IR spectrum obtained after FVP of **3** at 620 °C and trapping the products in argon at 25 K. The spectrum was recorded after cooling to 3 K and shows bands assigned to **2**. b) – e) Difference IR spectra of four isotopomers of **2** showing changes induced by cooling the matrix from 25 K to 3 K. The first spectrum was taken immediately after cooling to 3 K, the second spectrum after a waiting time of approximately 15 min. Bands pointing downwards are decreasing in intensity, bands pointing upwards are increasing in intensity at 3 K. b) **2**-h<sub>2</sub><sup>16</sup>O<sub>2</sub> c) **2**-h<sub>2</sub><sup>18</sup>O<sub>2</sub> d) **2**-d<sub>2</sub><sup>16</sup>O<sub>2</sub> e) **2**-d<sub>2</sub><sup>18</sup>O<sub>2</sub>. Bands labelled A are assigned to the major conformer **2a**, bands labelled B to the minor conformer **2b**.

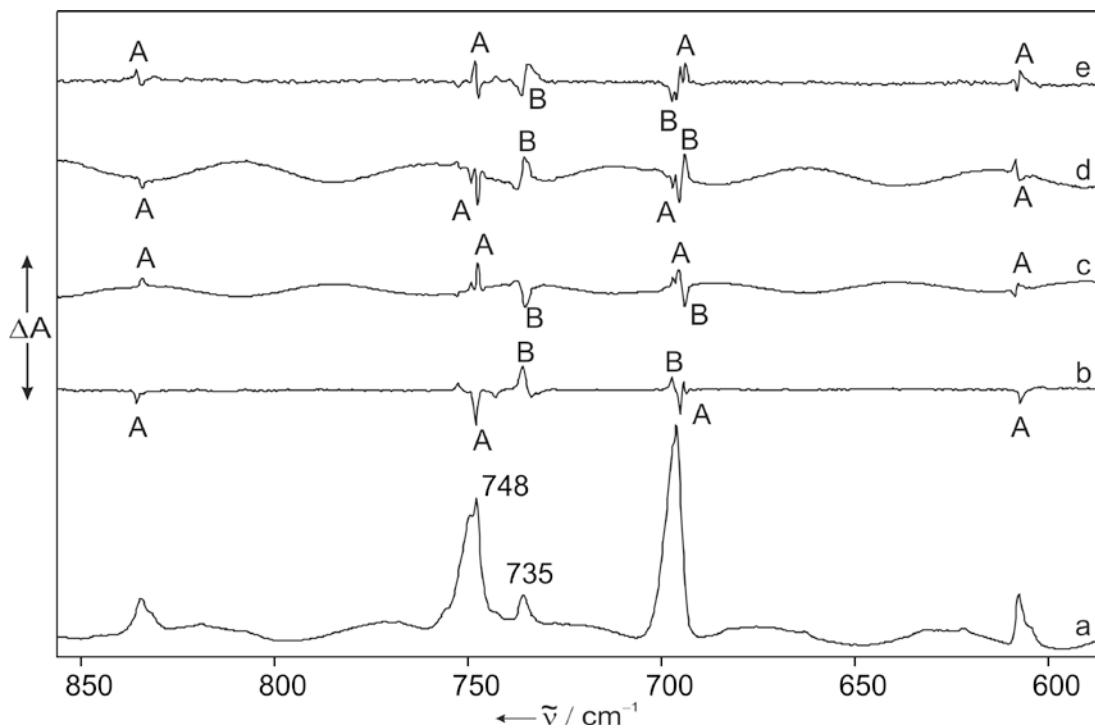

**Figure S4.** Difference IR spectra showing the interconversion of the two conformers of benzylperoxy radical (**2**) at 3 K. Bands pointing upwards are increasing in intensity, bands pointing downwards are decreasing in intensity. Difference IR spectra showing changes of (a) **2**-h<sub>2</sub><sup>16</sup>O<sub>2</sub> and (c) **2**-h<sub>2</sub><sup>18</sup>O<sub>2</sub> after keeping the matrix for several minutes at 3 K. Computed difference IR spectrum [B3LYP-D6-311++G(2d,2p)] obtained by subtracting **2**-gauche from **2**-anti for: (b) **2**-h<sub>2</sub><sup>16</sup>O<sub>2</sub> (d) **2**-h<sub>2</sub><sup>18</sup>O<sub>2</sub>. Bands labelled A are assigned to the major conformer **2a** (experimental spectra) or to **2**-anti (calculated spectra), bands labelled B to the minor conformer **2b** (experimental spectra) or to **2**-gauche (calculated spectra).

**Figure S5.** Difference IR spectra showing the interconversion of the two conformers of benzylperoxy radical (**2**) at 3 K. Bands pointing upwards are increasing in intensity, and bands pointing downwards are decreasing in intensity. Difference IR spectra showing changes of (a) **2**-h<sub>2</sub><sup>16</sup>O<sub>2</sub>, (c) **2**-h<sub>2</sub><sup>18</sup>O<sub>2</sub>, (e) **2**-d<sub>2</sub><sup>16</sup>O<sub>2</sub>, and (g) **2**-d<sub>2</sub><sup>18</sup>O<sub>2</sub> after keeping the matrix for several minutes at 3 K. Computed difference IR spectrum [B3LYP-D/6-311++G(2d,2p)] obtained by subtracting **2**-gauche from **2**-anti for: (b) **2**-h<sub>2</sub><sup>16</sup>O<sub>2</sub> (d) **2**-h<sub>2</sub><sup>18</sup>O<sub>2</sub> (f) **2**-d<sub>2</sub><sup>16</sup>O<sub>2</sub> (h) **2**-d<sub>2</sub><sup>18</sup>O<sub>2</sub>. Bands labelled A are assigned to the major conformer **2a** (experimental spectra) or to **2**-anti (calculated spectra), bands labelled B to the minor conformer **2b** (experimental spectra) or to **2**-gauche (calculated spectra).

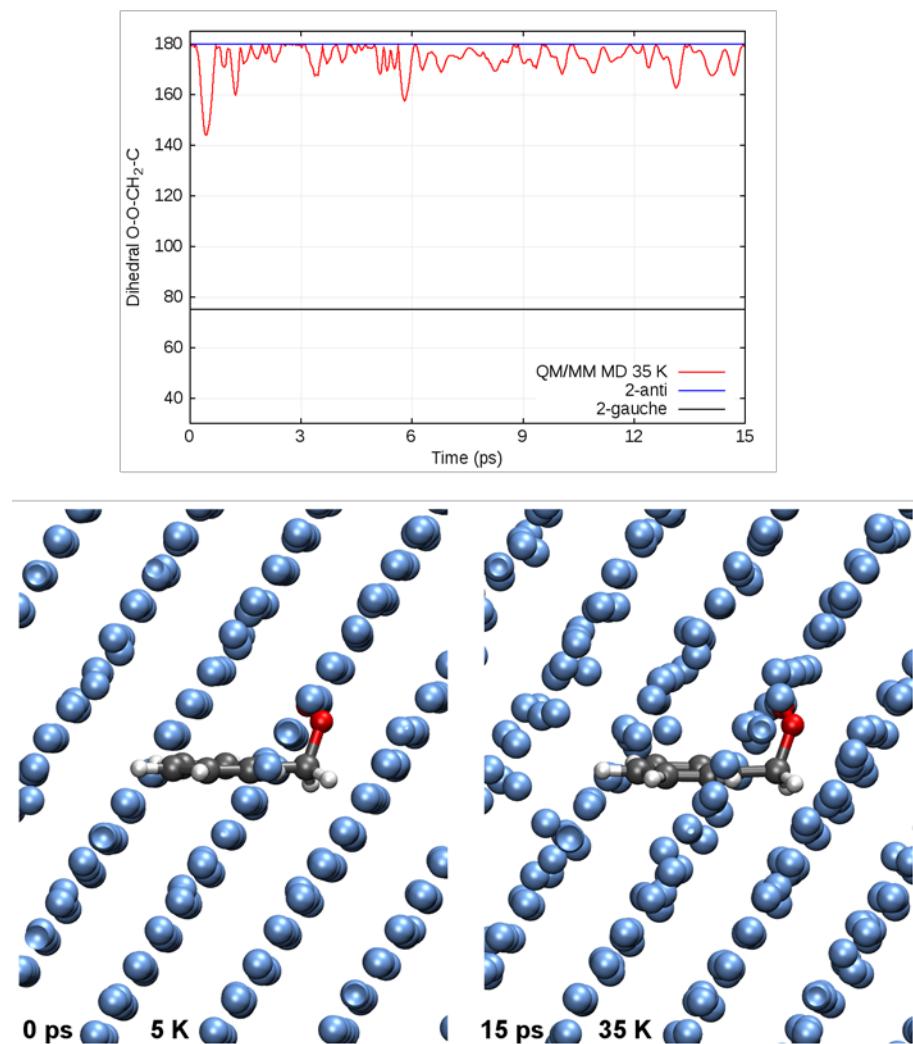

**Figure S6.** Difference IR spectra showing the interconversion of the two conformers of the benzylperoxy radical **2** at various temperatures. Bands pointing upwards are increasing in intensity and bands pointing downwards are decreasing in intensity. (a) Deposition spectrum of **2**- $\text{h}_2^{16}\text{O}_2$  at 3 K in argon. (b) Deposition spectrum of **2**- $\text{h}_2^{16}\text{O}_2$  at 3 K in nitrogen. (c) Difference spectrum obtained after annealing the matrix (b) at 10 K. (d) Difference spectrum after annealing the matrix (c) at 20 K. (e) Difference spectrum after cooling the matrix (d) at 10 K. (f) Difference spectrum obtained after cooling the matrix (e) at 3 K. Bands labelled A are assigned to the major conformer **2a**, bands labelled B to the minor conformer **2b**.

**Figure S7.** Difference IR spectra showing the interconversion of the two conformers of the benzylperoxy radical **2** at various temperatures. Bands pointing upwards are increasing in intensity and bands pointing downwards are decreasing in intensity. (a) Deposition spectrum of **2**- $\text{h}_2^{16}\text{O}_2$  at 3 K in argon. (b) Difference spectrum obtained after annealing the matrix (a) at 10 K. (c) Difference spectrum after annealing the matrix (b) at 25 K. (d) Difference spectrum after cooling the matrix (c) at 10 K. (e) Difference spectrum obtained after cooling the matrix (d) at 3 K. Bands labelled A are assigned to the major conformer **2a**, bands labelled B to the minor conformer **2b**.

**II. Calculations [B3LYP-D/6-311++G(2d,2p)] on the Benzylperoxy Radical Conformers 2-anti and 2-gauche**

**Figure S8. Top:** Behavior of the dihedral angle that involved both oxygen atoms in **2** showing no interconversion between **2-anti** and **2-gauche**.  
**Bottom:** Snapshot of the QM/MM MD simulation showing the increasing disorder in the Ar matrix.

**Table S1.** Experimental and calculated [B3LYP-D/6-311++G(2d,2p)] IR vibrations ( $\text{cm}^{-1}$ ) of conformer **2-gauche** and its different isotopomers

| <b>2-gauche</b> |      | B3LYP-D/6-311++G(2d,2p)       |                                 |                               |                                 |                               |                                 |                               |                                 |                               |                                 |                               |                                 |                               |                                 |                               |                                    |                           |

[a] Argon, 3 K. [b] Relative intensities based on the strongest absorption. [c] Calculated at the B3LYP-D/6-311++G(2d,2p) level of theory (unscaled). The assignment is based on band positions and intensities. [d] Calculated intensities in km/mol.

**Table S2.** Experimental and calculated [B3LYP-D/TZVPP//CHARMM] IR vibrations ( $\text{cm}^{-1}$ ) of conformer **2-gauche** and its different isotopomers

[a] Argon, 3 K. [b] Relative intensities based on the strongest absorption. [c] Calculated at the M06-2X/6-311++G(2d,2p) level of theory (unscaled). The assignment is based on band positions and intensities.

**Table S3.** Experimental and calculated [B3LYP-D/6-311++G(2d,2p)] IR vibrations ( $\text{cm}^{-1}$ ) of conformer **2-anti** and its different isotopomers

[a] Argon, 3 K. [b] Relative intensities based on the strongest absorption. [c] Calculated at the B3LYP-D/6-311++G(2d,2p) level of theory (unscaled). The assignment is based on band positions and intensities. [d] Calculated intensities in km/mol.

**Table S4.** Experimental and calculated [B3LYP-D/TZVPP//CHARMM] IR vibrations ( $\text{cm}^{-1}$ ) of conformer **2-anti** and its different isotopomers

### III. Calculated complexes, energies, IRC plot and computed vibrations

**Figure S9.** **A.** Calculated complexes between benzyl radical and oxygen. **B.** Complexes between benzaldehyde and hydroxyl radical. **C.** Complexes between benzoyl radical and water. **D.** Complexes between benzaldehyde and water. UM06-2X and UB3LYP-D (parenthesis) distances are shown in Å

**Figure S10.** Intrinsic Reaction Coordinates plot for the four transition states connecting oxygen and benzyl radical with water and benzoyl radical. All distances are in Å. All energies and distances refer to the optimization with the UM06-2X functional.

**Table S5.** Stabilization Energies ( $\Delta E$ ) and Basis Set Superposition Error corrected Stabilization Energies ( $\Delta E_{\text{BSSE}}$ ) corresponding to the structures shown in **Figure S8**. Superscripts M, CCSD(T) and B refer to UM06-2X, UCCSD(T) and UB3LYP-D energies. All energies are in kcal·mol<sup>-1</sup>.

#### IV. Photochemistry of the benzylperoxy radical at 365 nm

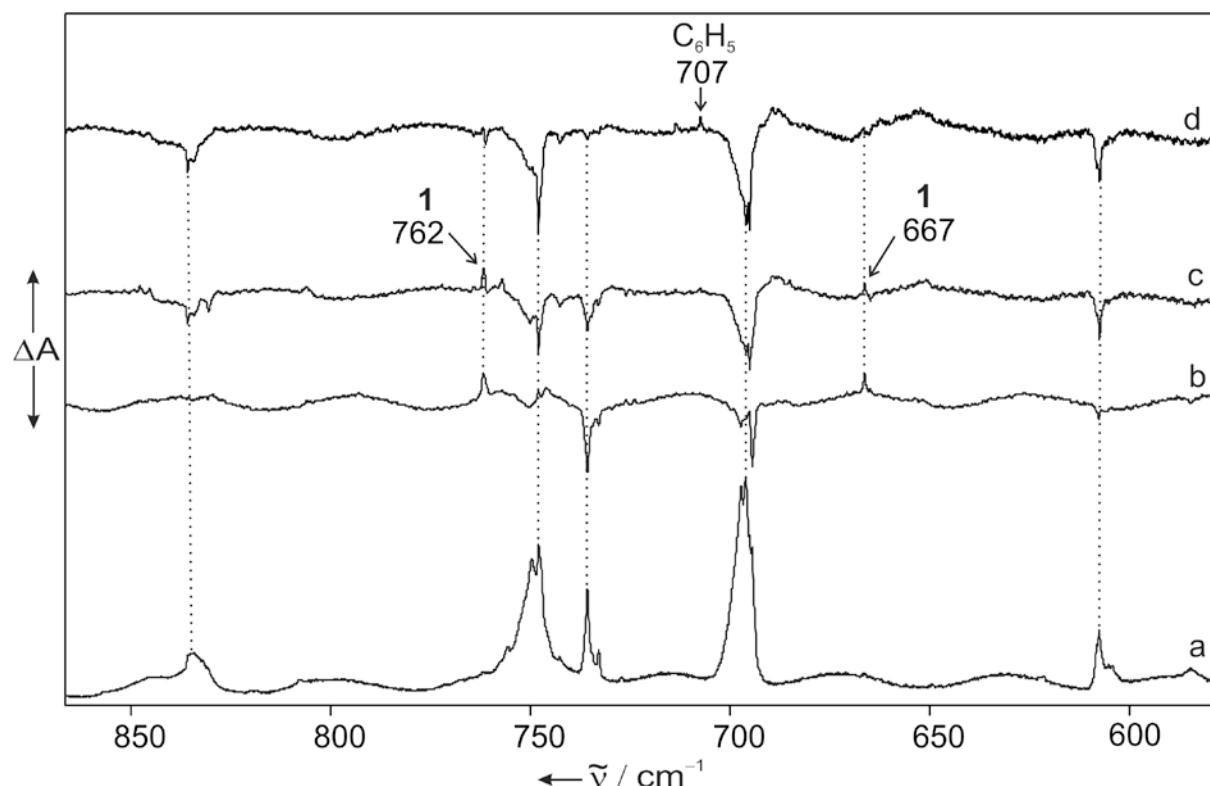

**Figure S11.** Difference IR spectra showing the photochemistry of **2**-h<sub>2</sub><sup>16</sup>O<sub>2</sub> and **2**-h<sub>2</sub><sup>18</sup>O<sub>2</sub> in argon at 3 K. Bands pointing upwards are appearing and bands pointing downwards are disappearing during the experiments. (a) Difference spectrum obtained after irradiating the deposited spectrum of **2**-h<sub>2</sub><sup>16</sup>O<sub>2</sub> at 365 nm for 10 min at 3 K. (b) Same matrix, warming from 3 K to 25 K. (c) Reference spectrum of benzaldehyde **4**, matrix-isolated in 1% H<sub>2</sub>O-doped argon. Difference of the spectra taken at 3 K and taken after warming to 30 K, showing the formation of the **4**-H<sub>2</sub>O complex. (d) Difference spectrum obtained after irradiating the deposited spectrum of **2**-h<sub>2</sub><sup>18</sup>O<sub>2</sub> at 365 nm for 10 min at 3 K.

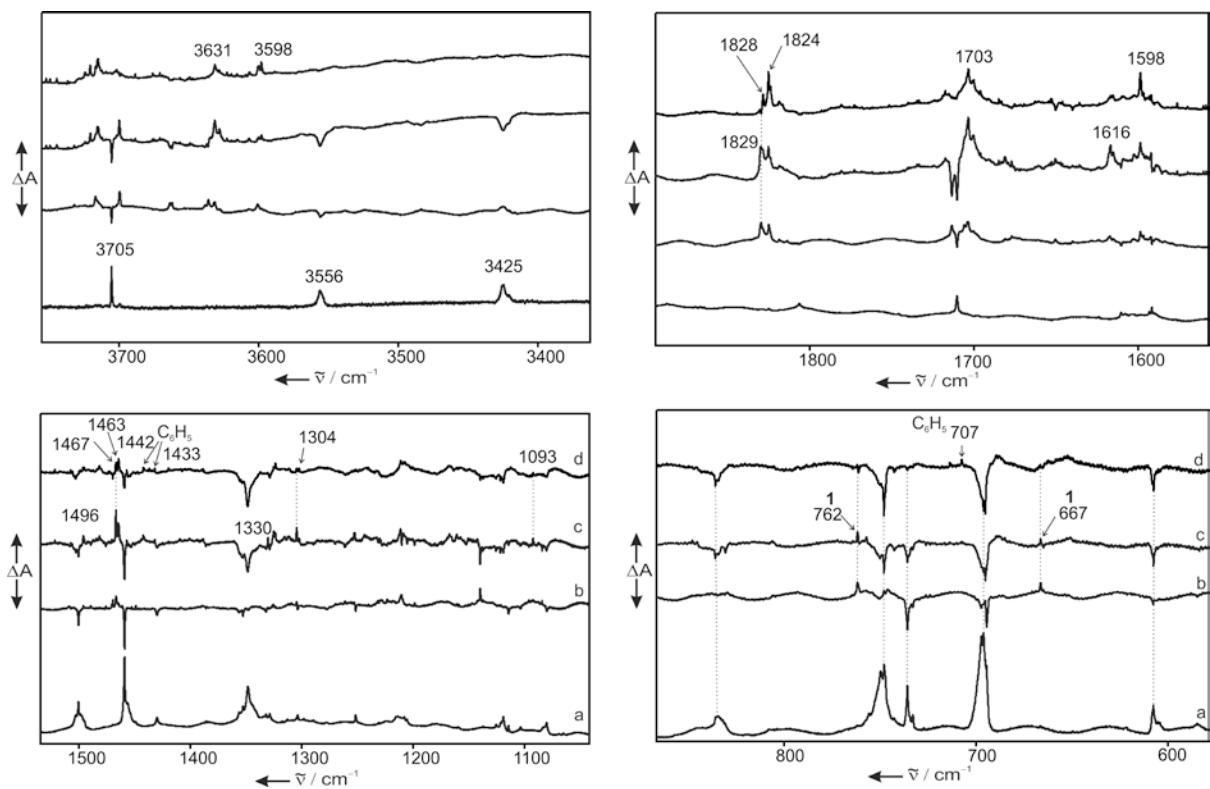

**Figure S12.** Difference IR spectra showing the photochemistry of benzylperoxy radical (**2-h<sub>2</sub><sup>16</sup>O<sub>2</sub>**) and several isotopomers (**2-h<sub>2</sub><sup>18</sup>O<sub>2</sub>**, **2-d<sub>2</sub><sup>16</sup>O<sub>2</sub>**, and **2-d<sub>2</sub><sup>18</sup>O<sub>2</sub>**) in argon at 3 K. Bands pointing upwards are appearing and bands pointing downwards are disappearing during the experiments. Difference spectrum obtained after irradiating the deposited spectrum of **2** at 365 nm for 10 min at 3 K. (a) **2-h<sub>2</sub><sup>16</sup>O<sub>2</sub>** (b) **2-h<sub>2</sub><sup>18</sup>O<sub>2</sub>** (c) **2-d<sub>2</sub><sup>16</sup>O<sub>2</sub>** (d) **2-d<sub>2</sub><sup>18</sup>O<sub>2</sub>**.

## V. Long time photochemistry with 365-320 nm

**Figure S13.** Difference IR spectra in this region 600-900  $\text{cm}^{-1}$  showing the photochemistry of benzylperoxy radical ( $\text{C}_6\text{H}_5\text{O}_2^{\cdot}$ ) in argon at 3 K. Bands pointing upwards are appearing and bands pointing downwards are disappearing during photolysis. (a) Deposition spectrum of  $\text{C}_6\text{H}_5\text{O}_2^{\cdot}$  at 3 K. Same matrix as (a) after (b) 60 min irradiation at  $\lambda = 365 \text{ nm}$ , (c) several hours irradiation at  $\lambda = 365 \text{ nm}$ , (d) several hours irradiation at  $\lambda = 320 \text{ nm}$ .

**Figure S14.** Difference IR spectra showing the photochemistry of benzylperoxy radical ( $\text{2-h}_2^{16}\text{O}_2$ ) in argon at 3 K. Bands pointing upwards are appearing and bands pointing downwards are disappearing during photolysis. (a) Deposition spectrum of  $\text{2-h}_2^{16}\text{O}_2$  at 3 K. Same matrix as (a) after (b) 60 min irradiation at  $\lambda = 365 \text{ nm}$ , (c) several hours irradiation at  $\lambda = 365 \text{ nm}$ , (d) Several hours irradiation at  $\lambda = 320 \text{ nm}$ .
