The authors regret that the fitting equation for the Young's modulus of CuCrZr after SAA as heat treatment should be

$$E_{\text{average,SAA}}(T) \text{ -GPa} = -1.9234 \times 10^{-4} \times T^2 + 2.1233 \times 10^{-2} \times T + 124.91 \text{ (T-}^\circ\text{C)}$$

The authors would like to apologise for any inconvenience caused.
