**Supplemental Figure S2.** *Oba120* and *Og120* as pseudogenes. There are two mutation “G” to “T”, G” to “T” and “C” to “A”. The outcome of these mutations is the creation of three stop codons: TAG, TAG and TAA.

**Supplemental Figure S3.** Phylogenetic tree of all terpene synthase (TPS) genes from *Oryza sativa* and *Arabidopsis thaliana*. The phylogenetic tree was conducted using cDNA sequences. The TPS genes from the two species are color-coded. Also indicated are TPS subfamilies and the three tandemly arrayed TPS genes from *O. sativa* (*Os080*, *Os100* and *Os120*) within the TPS-a subfamily.

**Supplemental Figure S4.** Multiple sequenced alignment of *Oryza* TPSs. Indicated are four amino acids in the active sites that are implicated in determining product specificity.
