**Figure S1.** Ice and/or crust layers recorded in the Illimani's firn core (blue vertical lines) along with the records of  $\delta D$  (a) and GPPnb (b). The gray area in the depth range 4–6 mw.eq. features more ice/crust layers than the gray area within the 11.5–13.5 mw.eq. interval. However, both the variability in (a) and (b) show no evidence of signal change due to the occurrence of these layers.

**Table S1.** Sections of the Nevado Illimani firn core analysed for elemental (N1 to N10) and mineralogical (R1 to R4) composition.

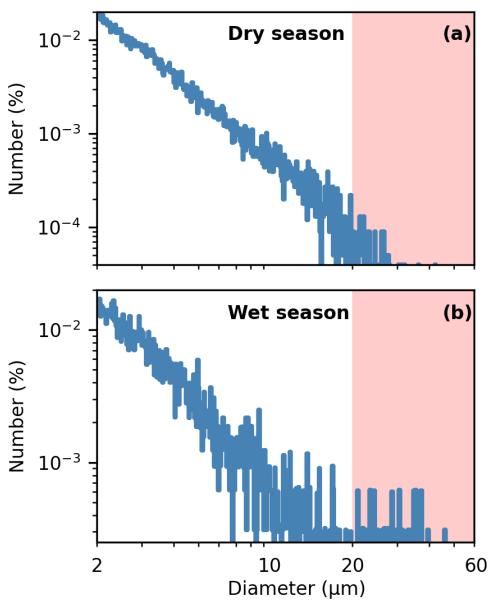

| Sample           | N1   | N2   | N3   | N4   | N5    | N6    | N7    | N8    | N9    | N10   | R1   | R2   | R3   | R4    |
|------------------|------|------|------|------|-------|-------|-------|-------|-------|-------|------|------|------|-------|
| Top depth (m)    | 1.67 | 2.31 | 5.57 | 8.67 | 10.56 | 13.60 | 13.69 | 19.10 | 20.29 | 21.41 | 5.79 | 5.91 | 9.80 | 10.00 |
| Bottom depth (m) | 2.31 | 3.78 | 7.02 | 8.97 | 11.66 | 13.69 | 14.78 | 19.25 | 20.48 | 22.50 | 5.82 | 6.00 | 9.84 | 10.17 |

**Table S2.** Average elemental concentrations measured by Instrumental Neutron Activation Analysis, and the procedural errors and detection limits (DL). For comparison, we also present mean concentrations of dust particles from high elevation ice cores in the Alps (Thevenon et al., 2009) and in Tibetan plateau (Wu et al., 2009).

| Element                               | Ce   | Cs   | Eu   | Hf   | La   | Sc   | Sm   | Th   | Yb   |
|---------------------------------------|------|------|------|------|------|------|------|------|------|
| Concentration (ppm)                   | 89.8 | 21.1 | 1.6  | 13.1 | 40.8 | 13.7 | 8.14 | 17.6 | 2.71 |
| Error (%)                             | 7.24 | 13.8 | 6.65 | 9.97 | 4.05 | 3.97 | 7.27 | 7.16 | 10.8 |
| DL (ppm)                              | 7    | 4    | 0.8  | 3    | 0.5  | 0.3  | 0.1  | 4    | 0.1  |
| Colle Gnifetti ice core, Alps (ppm)   | 1.76 | 1.20 | 1.78 | 5.24 | 2.74 | 18.6 | 4.63 | 3.49 | 6.25 |
| Dunde ice core, Tibetan Plateau (ppm) | 65.7 |      | 1.09 | 4.04 | 32.6 |      | 5.51 | 14.3 | 2.93 |

**Table S3.** Mineral phases and relative abundance (number of grains, %) in Illimani firn from different time periods.

|                           | R1    | R2      | R3      | R4    |
|---------------------------|-------|---------|---------|-------|
| Year                      | 2010  | 2009–10 | 2004–05 | 2004  |
| Season                    | dry   | wet     | wet     | dry   |
| Particles analyzed        | 167   | 161     | 138     | 167   |
|                           | N (%) | N (%)   | N (%)   | N (%) |
| Quartz and polymorphs     | 31.7  | 21.7    | 13.8    | 23.4  |
| K-feldspars               | 7.2   | 10.6    | 5.1     | 11.4  |
| Plagioclases              | 10.8  | 9.3     | 7.2     | 18.6  |
| Muscovite-illite-smectite | 23.4  | 29.2    | 59.4    | 19.2  |
| Other phyllosilicates     | 0.6   | 1.2     | 0       | 1.2   |
| Clay minerals (kaolinite) | 0.6   | 1.2     | 0       | 3     |
| Clinopyroxenes            | 0     | 0.6     | 0       | 0     |
| Orthopyroxenes            | 0     | 0       | 0       | 0     |
| Amphiboles                | 0     | 0       | 0       | 0     |
| Rutile                    | 2.4   | 2.5     | 0       | 0.6   |
| Anatase                   | 4.2   | 6.8     | 4.3     | 2.4   |
| Hematite                  | 9     | 8.7     | 7.2     | 14.4  |
| Goethite                  | 8.4   | 5.6     | 1.4     | 3     |
| Carbonates                | 0     | 1.2     | 0       | 0     |
| Epidotes                  | 0     | 0       | 0       | 0     |
| Titanite                  | 0     | 0       | 0       | 0     |
| Tourmaline                | 1.2   | 0       | 0.7     | 0.6   |
| Other heavy minerals      | 0.6   | 1.2     | 0.7     | 1.2   |
| Other light minerals      | 0     | 0       | 0       | 1.2   |
| Total                     | 100   | 100     | 100     | 100   |

**Figure S2.** The number size distribution of a typical sample from the (a) dry and (b) wet season. Red areas highlight the giant particles (between 20 and 60  $\mu\text{m}$ )
