Table S1: Station coordinates (latitude, longitude, ellipsoid height, and geoid height), start and end date of available measurements, root mean square (RMS) of post-fit residuals, percentage of fixed ambiguities, actual number and percentage of expected ZTD estimates, 95% percentile of ZTD formal error, percentage of data rejected by the screening step, final number of ZTD (and IWV) estimates, and mean IWV over the period. Stations with less than 50% of data before screening are highlighted in bold font. Stations with more than 0.5% of data rejected by the screening are underlined.

Table S2: Results of IWV comparison between GNSS and ERA5 hourly data. The columns give: the mean IWV from ERA5, the mean and standard deviation of the difference (GNSS - ERA5) in  $\text{kg m}^{-2}$  and %, the correlation coefficient, the slope and offset of the linear regression of GNSS onto ERA5 with errors in both coordinates (York et al., 2004) and the number of comparison points.

Table S1

Station ID	Lat (deg)	Lon (deg)	Ellipsoid Height (m)	Geoid Height (m)	Start	End	RMS residuals (m)	AMB (%)	NP before	% before	95% Sigma (m)	% reject	NP final	IWV (kg m <sup>-2</sup> )
