# Extracting Multi-valued Relations from Language Models 

Sneha Singhania, Simon Razniewski, Gerhard Weikum<br>Max Planck Institute for Informatics<br>\{ssinghan, srazniew, weikum\}@mpi-inf.mpg.de

#### Abstract

The widespread usage of latent language representations via pre-trained language models (LMs) suggests that they are a promising source of structured knowledge. However, existing methods focus only on a single object per subject-relation pair, even though often multiple objects are correct. To overcome this limitation, we analyze these representations for their potential to yield materialized multiobject relational knowledge. We formulate the problem as a rank-then-select task. For ranking candidate objects, we evaluate existing prompting techniques and propose new ones incorporating domain knowledge. Among the selection methods, we find that choosing objects with a likelihood above a learned relationspecific threshold gives a $49.5 \%$ F1 score. Our results highlight the difficulty of employing LMs for the multi-valued slot-filling task, and pave the way for further research on extracting relational knowledge from latent language representations.

## 1 Introduction

Petroni et al. (2019) showcased the potential of relation-specific probes for extracting implicit knowledge from latent language representations. But the viability of materializing factual knowledge directly from LMs remain open problems (Razniewski et al., 2021; AlKhamissi et al., 2022).

Building upon the LAMA framework, where an LM predicts an object in the slot for given a clozestyle prompt such as "Dante was born in [MASK]", several methods (Jiang et al., 2020b; Shin et al., 2020; Zhong et al., 2021; Qin and Eisner, 2021) design effective prompts for factual information extraction. Importantly, however, all these methods implicitly assume the existence of a single correct object per (subject, relation)-pair and evaluate on precision at rank 1. In reality, many relations have multiple correct values as illustrated in Figure 1.

Figure 1: Probing LMs to extract objects for multivalued relations.

In this paper, we focus on probing LMs directly for multi-valued slot-filling task. In a zero-shot setting, an LM is probed using prompts that include a subject and a multi-valued relation to generate a list of candidate objects. However, prior knowledge of the no. of correct objects is generally unknown. Since the LM's probabilities alone do not provide a clear indication of the objects' factual accuracy (Jiang et al., 2021; Holtzman et al., 2021), we apply various selection mechanisms on the generated list to choose the correct objects.

We probe LMs using existing prompting techniques and introduce new relation-specific prompts. The generated object lists are evaluated by their order, and our manual prompts result in higherquality lists than the state-of-the-art automated methods. Our prompts outperform the best baseline, SoftPrompts, by ca. $5 \%$ points on the three most challenging relations (parts of chemical compounds, official languages of countries, instruments of musicians), while being competitive on the other four relations. While evaluating the output of selection mechanisms, our best approach achieves $54.1 \%$ precision, $50.8 \%$ recall, and $49.5 \% \mathrm{~F} 1$ score. These trends in scores demonstrate the difficulty of extracting complete knowledge from internal LMs representations.

## 2 Background

The idea of knowledge extraction using LMs representations was put forward by Radford et al. (2019); Petroni et al. (2019), and has since received much attention. Several approaches (Bouraoui et al., 2019; Goswami et al., 2020; Chen et al., 2022) use relational metadata and textual corpora to tune the LM using knowledge-enriched representations and efficiently extract knowledge. Jiang et al. (2020a); Kassner et al. (2021) focus on multilingual knowledge extraction, while Dhingra et al. (2022) looks at extracting temporal knowledge from LMs. Current methods usually sample from correct objects for a given subject-relation pair by employing the hits @ k metric and do not enforce deliberate accept/reject decisions on the outputs.

## 3 Methodology

Candidate List Generation When probing an LM using a cloze-style prompt, the LM generates a probability distribution over the vocabulary tokens to fill in the masked position. For our task, we use prompts mentioning a subject-relation $\langle\mathrm{s}$, $r$ ) pair and consider the resulting ranked list of tokens ( $\mathrm{w} /$ their corresponding probability scores) as candidates. In a zero-shot setting, the LM is probed using two types of prompts: (i) discrete prompts such as LPAQA (Jiang et al., 2020b) and AUTOPROMPT (Shin et al., 2020), and (ii) continuous prompts such as OPTIPROMPT (Zhong et al., 2021) and SoftPrompts (Qin and Eisner, 2021).

In addition, we propose a collection of carefully designed manual prompts to evaluate and compare the generated objects for multi-valued relations. We create 50 diverse relation-specific prompts by incorporating domain knowledge, relation type, and variations in sentence structure and grammar. Our prompts differ in verb form, tense, placement of the masked token (whether it is predicted in a prefix, suffix, or cloze-style), and whether or not there is a period and object type in the context.

Selection Mechanisms We experiment with the following parameterized mechanisms on the generated object lists to get a valid subset of triples.
Top- $k$ : The most probable $k$ objects are selected.
Prob- $x$ : Objects with a probability greater than or equal to $x$ are chosen.
Cumul- $x$ : Retain all objects, in order of probability, whose summed probability is no larger than $x$. In difference with Prob- $x$, it would enable retaining
candidates of similarly moderate probability.
Count Probe: We probe the LM again to get an object count prediction for a $\langle s, r\rangle$. A count probe could be as follows, "Italy borders a total of [MASK] countries". From the list of generated tokens, the highest-ranked integer type token (either in alphabetical or numerical form) is used to subset the original object list.
Verification Probe: We probe the same LM again on each candidate object to factually verify the generated subject-relation-object $\langle s, r, o\rangle$ triple. A verification probe could be as follows, "Italy and France share a border? Answer: [MASK]". We compare the relative probabilities of the _yes versus _no tokens in the masked position, using ( $p_{-}$yes $-p_{\text {_no }}>\alpha$ ), with $\alpha$ is a hyper-parameter, to determine the correctness of the original candidate object, France. All the original candidate objects satisfying the comparison condition are selected.

## 4 Experiment

Dataset The seven diverse multi-valued relations appearing in LAMA benchmark (Petroni et al., 2019) are chosen. For each relation, approx. 200 subjects and a complete list of objects from the popular Wikidata KB (Vrandečić and Krötzsch, 2014) are sampled. The subjects were picked based on popularity, measured using Wikidata ID and count of Twitter followers for person-type subjects ${ }^{1}$.

Evaluation In the ranking phase, the quality of a candidate list is assessed using the maximally possible F1 score, defined as the highest possible F1 score achieved by applying the top- $k$ selection mechanism with the optimal $k$ value. The optimal $k$ is found by iterating over all possible choices of $k$ and calculating the respective F 1 score on the subset of candidate objects and ground-truth objects. In the selection phase, the output triples obtained after applying a selection mechanism are evaluated using precision, recall, and F1 score.

Setup We reuse the best prompts reported by each prompting baseline, which are tuned on much larger data. We probe BERT (Devlin et al., 2019) on each $\langle s, r\rangle$ and generate the 500 most probable candidate objects. The generated list is postprocessed to remove stopwords and other typeirrelevant objects depending on the relation type, only to retain sensible candidate objects. Our dataset is split into train, dev, and test, with

[^0]| 〈subject, relation $\rangle$ Ours | Mined | Para | AUTO OPTI | Soft |  |  |

| person, instrument | 62.5 | $\mathbf{6 3 . 4}$ | 61.3 | 61.7 | 52.7 | 57.0 |
| person, speaks-lang | $\mathbf{7 2 . 8}$ | 69.1 | 41.1 | 52.8 | 71.5 | 69.0 |
| person, occupation | 33.2 | 40.2 | $\mathbf{4 4 . 9}$ | 37.5 | 36.6 | 36.9 |
| state, borders | 25.7 | 23.8 | 24.3 | 24.4 | 25.9 | $\mathbf{2 5 . 9}$ |
| Overall (avg.) | $\mathbf{6 1 . 3}$ | 54.7 | 48.7 | 53.0 | 57.7 | 59.4 |

Table 1: Comparing generated object lists by probing BERT-large using macro-averaged max-F1(\%) scores. Mined is LPAQA's mining-based prompts and Para is LPAQA's paraphrasing-based prompts. AUTO uses the open-sourced AUTOPROMPT templates. OPTI and Soft are OPTIPROMPT and SoftPrompts obtained by training the LM using author-released data and code.

100/~50/50 subjects per relation, for tuning and estimating parameters in the selection mechanisms.

## 5 Results

Candidate List Generation We compare the candidate list generated by each prompting method in Table 1. Our prompts generate the best object lists in terms of macro-averaged max-F1 score. Unlike our prompts, discrete prompts have a lower performance, while continuous counterparts have a similar performance. Surprisingly, OPTIPROMPT obtained by initializing its continuous vectors using our prompts has a lower score.

To validate the effectiveness of our prompts and inspect if optimizing prompts on precision@ 1 is sufficient for extraction on multi-valued relations, we compare the best prompts in terms of precision@1 and max-F1 score. In Table 2, we see that prompts performing well on precision@1 are not necessarily the best on max-F1. Overall, prompts suitable for multi-valued extraction are more often of the prefix type, while prompts in the singleobject case show more variance. In Appendix, Table 4 shows examples of generated lists, and Tables 9-15 lists all the prompt templates. The large gap between precision@1 and max-F1 indicates the difficulty in designing task-specific prompts and raises the need for developing more robust prompts.

Object Selection The candidate objects retained after applying a selection mechanism are compared against the ground-truth objects, and the results are shown in Table 3. The top- $k$ method achieves the best overall F1 score, which is the macro-average of individual $\langle s, r\rangle$ tuple-specific $F 1$ scores. The
individual F1 scores and max-F1 (upper bound) have a large gap since the probabilities of predicted tokens are not calibrated enough to match the actual factuality of the $\langle s, r, o\rangle$ triple. Table 5 in Appendix gives the prompt templates and learned parameters of each selection mechanism.

## 6 Discussion

Although BERT was probed for 500 objects when generating object lists, only 119.7 objects were retained after post-processing. Objects with invalid types occur due to the zero-shot setting. Also, other eminent masked LMs, including BERTbase, RoBERTa-base, and RoBERTa-large, achieve $60.61 \%, 54.82 \%$, and $58.90 \%$ max-F1 scores.

The max-F1 scores in Table $1 \& 2$ are far from $100 \%$, i.e., LMs do not generate candidate lists that correctly rank all true objects above the false ones. In particular, max-F1 will not reach $100 \%$ when correct objects are ranked too low or absent. We found that $26.90 \%$ of valid objects in a candidate list were ranked below the optimal threshold and $27.75 \%$ of valid objects were not generated at all.

In Table 3, the top- $k$ and prob- $x$ achieve balanced precision and recall scores. The count-probe achieves a high recall since almost always a count greater than 10 is predicted, and in our dataset, the average count of ground-truth objects across all $\langle\mathrm{s}$, $r\rangle$ is in $[1,10]$ range. In the verification probe, the parameter $\alpha$ is near zero for most relations, and the probability of _yes is greater than _no, leading to a selection of all the candidate objects. Although Schick and Schütze (2021) and others show the effect of verbalizing labels to _yes and _no tokens in the few-shot setting on classification and inference tasks, optimally using them for factual knowledge extraction remains an open challenge.

Effect of Prompt Template In Table 3, each mechanism is evaluated on the candidate list generated using prompt templates shown in max-F1 column in Table 2. However, by choosing a different set of prompts, a higher overall F1 score of $51.3 \%$ with a lower $59.9 \%$ max-F1 can be achieved by using the prob- $x$ method. Table 6 in Appendix gives more details. This change in F1 scores shows the hardness of designing robust prompts.

Effect of Relation Type The candidate lists generated for popular subjects tend to have higher precision and recall. For instance, F1 score for (state, borders) with top- $k$ is the lowest due to the pres-

| state，borders | 24.4 | 22.6 | 22.9 | 63.1 | 21.1 | 24.9 | 21.9 | 18.3 | 13.7 | 10.0 | 24.3 | 13.9 | 2.4 | 26.2 | 4.3 | 25.7 |
| Overall（averaged） | 54.1 | 50.8 | 49.5 | 57.9 | 59.2 | 47.4 | 43.8 | 51.1 | 34.4 | 27.7 | 59.5 | 35.1 | 9.1 | 45.3 | 8.0 | 61.3 |

Table 3：Results on comparing triples using precision，recall，and F1 score when probing BERT－large and applying a selection mechanism．The bold－faced numbers are the highest achieved precision，recall，and F1 scores．
ence of long－tail subjects．Also for a large possible set of valid objects，e．g．，in occupation，LM only generates common professions with a high proba－ bility and negatively impacts the F1 scores．This behavior，however，helps in language type rela－ tions．A similar difference in performance can be observed in Shin et al．（2020）；Zhong et al．（2021）．

Calibrate using Web Signals We used the query hit rate from Bing to calibrate and select objects from the candidate list．Bing receives each $\langle s, r, o\rangle$ triple in the form of a natural language query．The hit rate is used in two ways：（i）subset，objects with non－zero hit rate，（ii）rerank，objects with non－zero hit rate are calibrated to the highest probability．In contrast to prob－$x$ F1 scores，we observe a high in－ crease in precision and decrease in recall applying （I）with a lower overall F1 score of $34.7 \%$ ，while the（II）method achieves higher recall and lower precision with a similar overall F1 score of $45.7 \%$ ． Table 7 in Appendix shows all the scoresx．

Effect of LM Size We probed larger LMs like T5（Raffel et al．，2020）and BART（Lewis et al．， 2020），which can generate a list of tokens with likelihoods using Beam search decoding algorithm， similar to masked LMs．With top－$k$ method，T5－ large achieves $43.6 \%$ precision， $41.7 \%$ recall，and $40.3 \%$ F1 score．BART－large achieves an even
lower $32.0 \%$ precision， $34.3 \%$ recall，and $30.8 \%$ F1 score．Table 8 in Appendix gives all the scores． These models tend to generate common objects and exhibit repetitive behavior．Also，the current trend is towards using autoregressive models like （chat－）GPT，like Alivanistos et al．（2022）；Cohen et al．（2023）used to extract multi－valued relations． However，unlike in our method，with no control over the selection mechanism，the LM directly out－ puts one final list in both works．While internally autoregressive models also use token probabilities that could be used for our approach，once one gen－ erates a full list，previously generated list items conflate the probabilities of items．

## 7 Conclusion

In this work，we evaluate using LM＇s internal rep－ resentation for materializing factual knowledge on multi－valued relations．We utilize existing prompt engineering techniques and propose new prompts tailored for multi－valued relations．The suggested selection mechanism approaches help to filter out valid triples．Our detailed analysis of the model＇s performance highlights the limitations of using zero－shot probing for the multi－valued slot－filling task．Future work could aim to improve overall pre－ cision and recall and measure the impact of using LMs to fill gaps in KBs．

| [ X ] has borders with [MASK] | 19.76 | 49.49 | 62.74 | 43.75 | 48.65 |
| [X] shares border with [MASK], which is a country. | 10.01 | 77.89 | 77.04 | 71.49 | 82.16 |
| $[\mathrm{X}]$ shares border with [MASK], which is a country | 10.08 | 78.13 | 76.62 | 71.38 | 81.62 |
| The neighbouring country of [X] is [MASK]. | 11.07 | 76.04 | 74.02 | 69.13 | 80.00 |
| The neighbouring country of [X] is [MASK] | 74.58 | 21.43 | 56.52 | 28.12 | 4.32 |
| The neighbouring countries of [X] are [MASK]. | 46.29 | 35.97 | 61.2 | 39.71 | 21.08 |
| The neighbouring countries of [X] are [MASK] | 149.41 | 23.07 | 43.63 | 24.41 | 8.65 |
| [ X$]$ shares a border with [MASK], which is a country. | 10.46 | 77.38 | 77.05 | 71.45 | 82.16 |
| [ X$]$ shares a border with [MASK], which is a country | 10.27 | 78.38 | 76.07 | 71.32 | 83.78 |
| $[\mathrm{X}]$ borders [MASK], which is a country. | 10.08 | 78.15 | 75.92 | 71.54 | 82.16 |
| [X] borders [MASK], which is a country | 10.03 | 76.53 | 76.39 | 71.04 | 81.62 |
| [MASK] is a neighbouring country of [X]. | 10.14 | 76.35 | 75.51 | 70.02 | 83.24 |
| [MASK] is a neighbouring country of [ $X$ ] | 10.51 | 73.66 | 74.97 | 68.1 | 80.00 |
| Which country shares border with [X]? Answer: [MASK]. | 8.74 | 58.42 | 71.62 | 57.49 | 53.51 |
| Which country shares border with [X]? Answer: [MASK] | 119.09 | 19.56 | 45.47 | 22.45 | 5.41 |
| Which country is near [X]? Answer: [MASK]. | 8.12 | 55.89 | 70.71 | 56.9 | 45.95 |
| Which country is near [X]? Answer: [MASK] | 89.11 | 19.21 | 45.86 | 22.92 | 5.95 |
| [MASK], which is a country, is near [X]. | 9.75 | 76.37 | 76.25 | 70.35 | 82.16 |
| [MASK], which is a country, is near [X] | 9.63 | 69.4 | 72.55 | 64.93 | 71.89 |
| The country, [MASK], shares border with [X]. | 9.42 | 71.85 | 71.59 | 64.32 | 74.59 |
| The country, [MASK], shares border with [X] | 11.21 | 62.09 | 67.23 | 56.32 | 64.32 |
| [MASK] is the bordering country of [X]. | 10.91 | 75.9 | 75.07 | 69.37 | 81.62 |
| [MASK] is the bordering country of [X] | 12.69 | 65.9 | 71.83 | 61.78 | 70.27 |
| The country, [MASK], shares border with [X], which is a country. | 8.52 | 71.85 | 74.25 | 66.52 | 75.68 |
| The country, [MASK], shares border with [X], which is a country | 8.69 | 71.83 | 73.57 | 66.28 | 76.76 |
| [MASK], which is a country, shares a border with [ X$]$. | 11.26 | 75.08 | 74.45 | 68.71 | 80.00 |
| [MASK], which is a country, shares a border with [X] | 11.98 | 68.41 | 72.85 | 64.18 | 74.05 |
| [MASK], which is a country, borders [X]. | 11.23 | 75.63 | 75.7 | 69.52 | 80.54 |
| [MASK], which is a country, borders [X] | 11.9 | 72.8 | 74.06 | 67.23 | 75.68 |
| [MASK], which is a country, has borders with [X]. | 13.42 | 72.52 | 74.88 | 67.53 | 77.84 |
| [MASK], which is a country, has borders with [ X ] | 12.77 | 67.38 | 71.64 | 62.24 | 71.89 |
| The neighbouring country of [X] is [MASK], which is a country. | 9.43 | 78.01 | 75.52 | 71.19 | 83.24 |
| The neighbouring country of [ $X$ ] is [MASK], which is a country | 8.99 | 76.85 | 75.96 | 70.78 | 83.24 |
| Which country shares border with [X]? The answer is [MASK]. | 234.62 | 27.4 | 28.8 | 24.76 | 21.62 |
| Which country shares border with [ X ]? The answer is [MASK] | 477.46 | 2.52 | 1.52 | 1.82 | 1.08 |
| Which country shares border with [ X$]$ ? Answer: [MASK], which is a country. | 7.36 | 67.73 | 73.18 | 64.68 | 67.57 |
| Which country shares border with [ X ]? Answer: [MASK], which is a country | 7.92 | 61.61 | 73.56 | 61.44 | 61.62 |
| $[\mathrm{X}]$ and [MASK] share a border. | 9.19 | 80.08 | 76.7 | 72.82 | 83.78 |
| [ X$]$ and [MASK] share a border | 9.18 | 78.29 | 77.21 | 71.96 | 84.86 |
| $[\mathrm{X}]$ and [MASK] are neighbouring countries. | 10.86 | 73.27 | 73.9 | 67.27 | 77.30 |
| $[\mathrm{X}]$ and [MASK] are neighbouring countries | 11.32 | 72.26 | 73.86 | 66.7 | 77.30 |
| [ X$]$ and [MASK] are neighbours. | 11.08 | 77.04 | 75.67 | 70.76 | 83.24 |
| $[X]$ and [MASK] are neighbours | 8.22 | 75.98 | 75.1 | 70.06 | 82.70 |

Table 10: Our proposed prompts for (country, shares borders) relation.

| Prompt Template | optimal $k$ precision recall max-F1 p@1 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| The official language of [X] is [MASK]. | 18.18 | 92.58 | 80.43 | 83.54 | 91.84 |
| The official language of $[X]$ is [MASK] | 18.22 | 90.73 | 79.66 | 81.66 | 88.27 |
| [MASK] is the official language of [X]. | 18.16 | 93.09 | 80.04 | 83.4 | 92.35 |
| [MASK] is the official language of [ $X$ ] | 18.2 | 92.15 | 80.17 | 83.1 | 91.33 |
| [X] has [MASK] as its official language. | 18.3 | 87.26 | 79.62 | 79.51 | 83.16 |
| $[\mathrm{X}]$ has [MASK] as its official language | 18.43 | 83.35 | 79.92 | 77.36 | 75.00 |
| The official languages of [X] are [MASK]. | 18.19 | 92.08 | 80.3 | 83.02 | 90.31 |
| The official languages of [X] are [MASK] | 25.24 | 29.18 | 77.04 | 33.08 | 16.84 |

| [ X$]$ learnt [MASK], which is a language. | 2.68 | 79.65 | 70.03 | 70.23 | 81.00 |
| [ X ] learnt [MASK], which is a language | 3.18 | 74.11 | 72.93 | 68.82 | 79.00 |
| [ X$]$ knows [MASK], which is a language. | 2.58 | 82.19 | 68.29 | 69.92 | 88.50 |
| [X] knows [MASK], which is a language | 2.54 | 81.04 | 68.78 | 70.12 | 87.00 |
| Languages spoken by [X] are [MASK]. | 2.64 | 78.99 | 68.52 | 68.6 | 86.50 |
| Languages spoken by [X] are [MASK] | 19.64 | 24.57 | 57.63 | 29.39 | 5.50 |
| In which language can [X] speak? Answer: [MASK]. | 2.45 | 82.8 | 65.31 | 68.18 | 91.50 |
| In which language can $[\mathrm{X}]$ speak? Answer: [MASK] | 110.26 | 19.29 | 39.12 | 23.86 | 1.00 |
| In which language can [X] talk? Answer: [MASK]. | 2.53 | 82.43 | 64.67 | 67.2 | 92.50 |
| In which language can [X] talk? Answer: [MASK] | 157.13 | 18.64 | 37.15 | 22.08 | 3.00 |
| In which language can [X] communicates? Answer: [MASK] | 142.3 | 19.28 | 36.47 | 22.15 | 3.00 |
| In which language can [X] communicates? Answer: [MASK] | 142.3 | 19.28 | 36.47 | 22.15 | 3.00 |
| [ X ] knows to speak in [MASK]. | 2.6 | 82.13 | 69.34 | 70.88 | 86.50 |
| [ X$]$ knows to speak in [MASK] | 18.97 | 50.01 | 61.15 | 45.91 | 42.50 |
| [ X$]$ speaks in [MASK], which is a language. | 2.85 | 78.28 | 70.92 | 70.02 | 82.00 |
| [ X$]$ speaks in [MASK], which is a language | 3.06 | 74.5 | 70.92 | 68.25 | 78.00 |
| [ X$]$ can speak in [MASK], which is a language. | 2.61 | 81.86 | 70.11 | 71.22 | 85.50 |
| [ X$]$ can speak in [MASK], which is a language | 2.88 | 77.43 | 71.18 | 69.82 | 84.50 |
| In [MASK], [X] spoke. | 3.12 | 72.21 | 62.23 | 61.27 | 74.50 |
| In [MASK], [X] spoke | 9.81 | 39.6 | 57.87 | 40.93 | 26.50 |
| In [MASK], which is a language, [X] spoke. | 2.83 | 77.59 | 69.16 | 68.24 | 80.50 |
| In [MASK], which is a language, $[\mathrm{X}]$ spoke | 2.91 | 77.5 | 69.2 | 68.11 | 78.50 |
| [X] learned to speak [MASK] fluently. | 2.89 | 78.81 | 71.55 | 70.46 | 80.00 |
| [X] learned to speak [MASK] fluently | 2.91 | 80.46 | 72.49 | 71.38 | 83.50 |
| [ X ] learned to speak [MASK], which is a language. | 2.73 | 80.59 | 70.28 | 70.4 | 82.50 |
| [X] learned to speak [MASK], which is a language | 3.26 | 75.33 | 71.25 | 68.07 | 80.00 |
| [ X ] communicates in [MASK], which is a language. | 2.44 | 83.7 | 67.28 | 69.82 | 85.50 |
| [X] communicates in [MASK], which is a language | 2.47 | 82.43 | 68.62 | 70.25 | 80.50 |
| [ $X$ ] spoke in [MASK], which is a language. | 3.17 | 74.57 | 69.58 | 66.67 | 79.00 |
| [X] spoke in [MASK], which is a language | 3.92 | 67.89 | 71.21 | 63.95 | 73.00 |
| [ X$]$ knows to speak in [MASK], which is a language. | 2.48 | 81.9 | 68.69 | 70.36 | 85.00 |
| [ X ] knows to speak in [MASK], which is a language | 2.97 | 77.49 | 70.76 | 69.88 | 81.00 |
| [ X$]$ learned to speak [MASK]. | 2.99 | 76.54 | 70.91 | 68.95 | 80.00 |
| [X] learned to speak [MASK] | 76.98 | 18.98 | 42.24 | 22.06 | 3.50 |
| [X] learnt [MASK] language. | 4.46 | 60.35 | 66.61 | 56.26 | 55.00 |
| [X] learnt [MASK] language | 4.62 | 62.27 | 68.51 | 58.51 | 63.00 |
| [ X ] addressed in [MASK], which is a language. | 2.52 | 81.3 | 68.71 | 70.15 | 82.00 |
| [ $X$ ] addressed in [MASK], which is a language | 2.69 | 79.85 | 70.65 | 70.75 | 82.00 |

Table 13: Our proposed prompts for (person, speaks a language) relation.

| Prompt Template | optimal $k$ precision |  | recall | ax-F1 | p@1 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| [ X ] is a [MASK] by profession. | 30.87 | 18.52 | 35.37 | 20.78 | 8.00 |
| [ $X$ ] is a [MASK] by profession | 28.39 | 20.08 | 34.17 | 21.23 | 13.00 |
| [ X ] is a [MASK]. | 19.23 | 35.01 | 35.98 | 29.3 | 40.50 |
| $[X]$ is a [MASK] | 20.02 | 34.14 | 33.8 | 26.34 | 41.50 |
| [ X$]$ is a [MASK], which is a profession. | 23.15 | 30.17 | 36.72 | 26.81 | 31.00 |
| [ X ] is a [MASK], which is a profession | 17.87 | 35.11 | 31.63 | 26.43 | 40.00 |
| [ X$]$ 's profession is [MASK]. | 61.53 | 13.22 | 44.71 | 17.2 | 3.00 |
| [X]'s profession is [MASK] | 111.9 | 6.14 | 22.31 | 6.72 | 1.50 |
| [ X$]$ worked as a [MASK]. | 25.75 | 21.29 | 33.97 | 22.68 | 20.50 |
| [X] worked as a [MASK] | 16.41 | 30.66 | 27.78 | 24.41 | 25.50 |
| [ X$]$ was a [MASK] for a living. | 20.94 | 37.44 | 27.59 | 23.97 | 48.00 |
| [ $X$ ] is a [MASK] for a living. | 15.66 | 38.35 | 30.19 | 27.14 | 53.00 |
| $[X]$ is a well-known [MASK]. | 14.58 | 39.76 | 33.36 | 30.8 | 59.00 |
| [X] is a well-known [MASK] | 11.64 | 45.35 | 32.37 | 33.21 | 54.50 |
| [ X ] worked as a [MASK], which is a profession. | 23.93 | 25.12 | 35.08 | 24.33 | 22.50 |
| [ X ] worked as a [MASK], which is a profession | 22.28 | 25.84 | 34.95 | 24.62 | 25.00 |
| [ $X$ ] worked as a [MASK] for a living. | 29.44 | 25.35 | 32.45 | 21.22 | 27.00 |
| [X] worked as a [MASK] for a living | 27.66 | 23.66 | 32.75 | 21.08 | 26.00 |
| [ X$]$ works as a [MASK]. | 32.09 | 17.79 | 38.41 | 21.05 | 19.00 |
| [X] works as a [MASK] | 21.62 | 25.43 | 31.52 | 23.02 | 20.50 |
| What is the profession of [X]? Answer: [MASK]. | 158.97 | 2.68 | 20.45 | 4.11 | 0.00 |
| What is the profession of [X]? Answer: [MASK] | 216.16 | 5.51 | 6.41 | 3.68 | 1.50 |
| What did [ X$]$ do for a living? Answer: [MASK]. | 225.71 | 1.8 | 8.83 | 2.33 | 0.00 |
| What did [X] do for a living? Answer: [MASK] | 326.04 | 3.28 | 3.27 | 2.23 | 1.00 |
| [X] worked as a professional [MASK]. | 20.84 | 26.52 | 36.39 | 26.9 | 24.00 |
| [X] worked as a professional [MASK] | 39.51 | 14.9 | 27.85 | 15.78 | 1.00 |
| [X] works as a professional [MASK]. | 22.99 | 25.73 | 38.29 | 26.45 | 23.00 |
| [X] works as a professional [MASK] | 35.24 | 16.39 | 30.64 | 17.54 | 2.00 |
| [X] is a professional [MASK]. | 33.5 | 19.12 | 42.3 | 23.4 | 2.50 |
| $[\mathrm{X}]$ is a professional [MASK] | 30.51 | 15.1 | 31.41 | 18 | 3.50 |
| [ X ] was a [MASK]. | 35.97 | 24.36 | 28.63 | 20.46 | 13.00 |
| [X] was a [MASK] | 29.84 | 31.56 | 26.78 | 21.66 | 33.00 |
| [ X$]$ served as a [MASK]. | 34.84 | 19.08 | 28.5 | 17.56 | 3.00 |
| [X] served as a [MASK] | 30.13 | 20.31 | 25.71 | 17.14 | 9.00 |
| [X] served as a [MASK], which is a profession. | 26.62 | 25.43 | 29.37 | 21.94 | 13.00 |
| [ X$]$ served as a [MASK], which is a profession | 35.59 | 16.22 | 24.68 | 16.07 | 0.00 |
| [X] became a [MASK]. | 24.79 | 22.97 | 30.52 | 21.71 | 20.00 |
| [X] became a [MASK] | 21.07 | 28.28 | 24.12 | 19.7 | 26.00 |
| [ X ] became a [MASK], which is a profession. | 24.82 | 23.87 | 35.55 | 24.4 | 24.50 |
| [ $X$ ] became a [MASK], which is a profession | 23.56 | 23.95 | 30.41 | 21.78 | 19.00 |
| [ $X$ ] is an [MASK]. | 6.75 | 63.21 | 14.61 | 19.86 | 54.50 |
| $[X]$ is an [MASK] | 14.35 | 26.24 | 13.94 | 15.54 | 11.00 |
| [X] was an [MASK]. | 6.71 | 61.71 | 13.59 | 18.83 | 50.00 |
| [ X ] was an [MASK] | 20.49 | 31.84 | 13.04 | 14.65 | 18.00 |
| [X] was a professional [MASK]. | 30.19 | 17.73 | 36.75 | 21.38 | 4.50 |
| [X] was a professional [MASK] | 51.69 | 12.68 | 29.00 | 14.65 | 0.50 |
| [X] joined as a [MASK], which is a profession. | 20.01 | 33.47 | 31.79 | 26.26 | 36.50 |
| [ $X$ ] joined as a [MASK], which is a profession | 17.54 | 27.09 | 29.91 | 25.06 | 9.50 |

Table 14: Our proposed prompts for (person, has an occupation) relation.

| Prompt Template | optimal $k$ | precision | recall | max-F1 | p@1 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| [X] shares border with [MASK]. | 285.62 | 35.78 | 21.85 | 25.18 | 32.50 |
| [X] shares border with [MASK] | 291.63 | 25.94 | 19.15 | 19.14 | 26.50 |
| [ X$]$ shares a border with [MASK]. | 285.64 | 36.08 | 22.02 | 25.39 | 32.50 |
| [X] shares a border with [MASK] | 296.5 | 22.06 | 18.2 | 17.32 | 20.00 |
| [X] borders [MASK]. | 285.81 | 35.48 | 21.51 | 24.63 | 34.00 |
| [ X$]$ borders [MASK] | 316.65 | 9.03 | 16.07 | 9.48 | 2.50 |
| [X] has borders with [MASK]. | 286.25 | 32.6 | 21.67 | 24.1 | 30.00 |
| [X] has borders with [MASK] | 306.04 | 10.59 | 16.58 | 10.83 | 3.50 |
| [X] shares border with [MASK], which is a [Y]. | 285.38 | 37.32 | 21.48 | 25.21 | 35.50 |
| [ X$]$ shares border with [MASK], which is a [Y] | 285.53 | 36.7 | 21.8 | 25.16 | 34.50 |
| The neighbouring [ Y$]$ of [X] is [MASK]. | 290.67 | 32.64 | 20.87 | 23.52 | 32.50 |
| The neighbouring [ Y$]$ of $[\mathrm{X}]$ is [MASK] | 371.29 | 6.00 | 8.67 | 6.08 | 0.50 |
| The $[\mathrm{X}][\mathrm{Y}]$ shares border with [MASK]. | 285.53 | 35.92 | 21.6 | 25.06 | 32.00 |
| The [X] [Y] shares border with [MASK] | 293.25 | 14.16 | 17.2 | 12.97 | 6.50 |
| [X] shares a border with [MASK], which is a [Y]. | 285.4 | 37.27 | 21.6 | 25.3 | 35.00 |
| [X] shares a border with [MASK], which is a [Y] | 285.56 | 36.81 | 21.77 | 25.21 | 35.50 |
| [ X$]$ borders [MASK], which is a [Y]. | 285.51 | 36.36 | 22.08 | 25.1 | 35.00 |
| [X] borders [MASK], which is a [Y] | 285.56 | 36.13 | 22.08 | 25.15 | 34.00 |
| [MASK] is a neighbouring [Y] of [X]. | 285.45 | 35.96 | 21.79 | 25.04 | 34.50 |
| [MASK] is a neighbouring [Y] of [X] | 285.51 | 34.73 | 21.43 | 24.52 | 31.50 |
| Which [Y] shares border with [X]? Answer: [MASK]. | 293.96 | 23.81 | 20.94 | 20.63 | 25.00 |
| Which [Y] shares border with [X]? Answer: [MASK] | 429.81 | 6.28 | 5.16 | 4.78 | 3.00 |
| Which [Y] is near [X]? Answer: [MASK]. | 286.75 | 23.85 | 20.66 | 20.44 | 20.00 |
| Which [Y] is near [X]? Answer: [MASK] | 432.43 | 5.58 | 6.21 | 4.67 | 1.50 |
| [MASK], which is a [Y], is near [X]. | 285.42 | 37.09 | 21.85 | 25.39 | 35.50 |
| [MASK], which is a [Y], is near [X] | 286.12 | 29.84 | 21.02 | 22.02 | 29.50 |
| The [Y], [MASK], shares border with [X]. | 285.78 | 32.22 | 21.64 | 24.1 | 31.50 |
| The [Y], [MASK], shares border with [X] | 286.05 | 28.00 | 21.31 | 22.26 | 26.50 |
| [MASK] is the bordering [Y] of [X]. | 285.41 | 37.06 | 21.94 | 25.43 | 35.50 |
| [MASK] is the bordering [Y] of [X] | 285.54 | 35.88 | 21.9 | 24.69 | 36.50 |
| The [Y], [MASK], shares border with [X], which is a [Y]. | 285.61 | 34.00 | 21.25 | 24.23 | 34.00 |
| The [Y], [MASK], shares border with [X], which is a [Y] | 285.64 | 33.48 | 21.88 | 24.29 | 34.50 |
| [MASK], which is a [Y], shares a border with [X]. | 285.37 | 37.96 | 21.86 | 25.49 | 37.00 |
| [MASK], which is a [Y], shares a border with [X] | 285.41 | 37.29 | 21.5 | 25.1 | 36.50 |
| [MASK], which is a [Y], borders [X]. | 285.35 | 38.46 | 21.8 | 25.65 | 37.50 |
| [MASK], which is a [Y], borders [X] | 285.46 | 36.25 | 21.46 | 24.68 | 36.00 |
| [MASK], which is a [Y], has borders with [X]. | 285.37 | 37.9 | 21.78 | 25.4 | 37.00 |
| [MASK], which is a [Y], has borders with [X] | 285.41 | 36.57 | 21.07 | 24.57 | 36.00 |
| The neighbouring [Y] of [X] is [MASK], which is a [Y]. | 285.46 | 36.14 | 21.78 | 24.75 | 35.50 |
| The neighbouring [Y] of [X] is [MASK], which is a [Y] | 285.68 | 33.13 | 21.73 | 23.75 | 32.50 |
| Which [Y] shares border with [X]? The answer is [MASK]. | 407.63 | 8.70 | 6.99 | 6.63 | 5.50 |
| Which [Y] shares border with [X] ? The answer is [MASK] | 499.0 | 0.00 | 0.00 | 0.00 | 0.00 |
| Which [Y] shares border with [X]? Answer: [MASK], which is a [Y]. | 285.71 | 32.77 | 21.72 | 23.74 | 30.50 |
| Which [Y] shares border with [X]? Answer: [MASK], which is a [Y] | 291.11 | 26.46 | 20.07 | 20.93 | 24.00 |
| [X] and [MASK] share a border. | 285.49 | 37.49 | 22.3 | 25.69 | 37.50 |
| [X] and [MASK] share a border | 285.49 | 37.54 | 22.3 | 25.71 | 37.00 |
| The $[\mathrm{X}][\mathrm{Y}]$ shares border with [MASK], which is a [Y]. | 285.43 | 37.26 | 21.72 | 25.36 | 36.00 |
| The [ X$][\mathrm{Y}]$ shares border with [MASK], which is a [Y] | 285.51 | 37.11 | 21.55 | 25.22 | 35.50 |
| $[\mathrm{X}]$ and [MASK] are neighbours. | 288.2 | 33.55 | 21.78 | 23.96 | 33.00 |
| [X] and [MASK] are neighbours | 290.68 | 33.77 | 21.68 | 23.92 | 33.50 |
