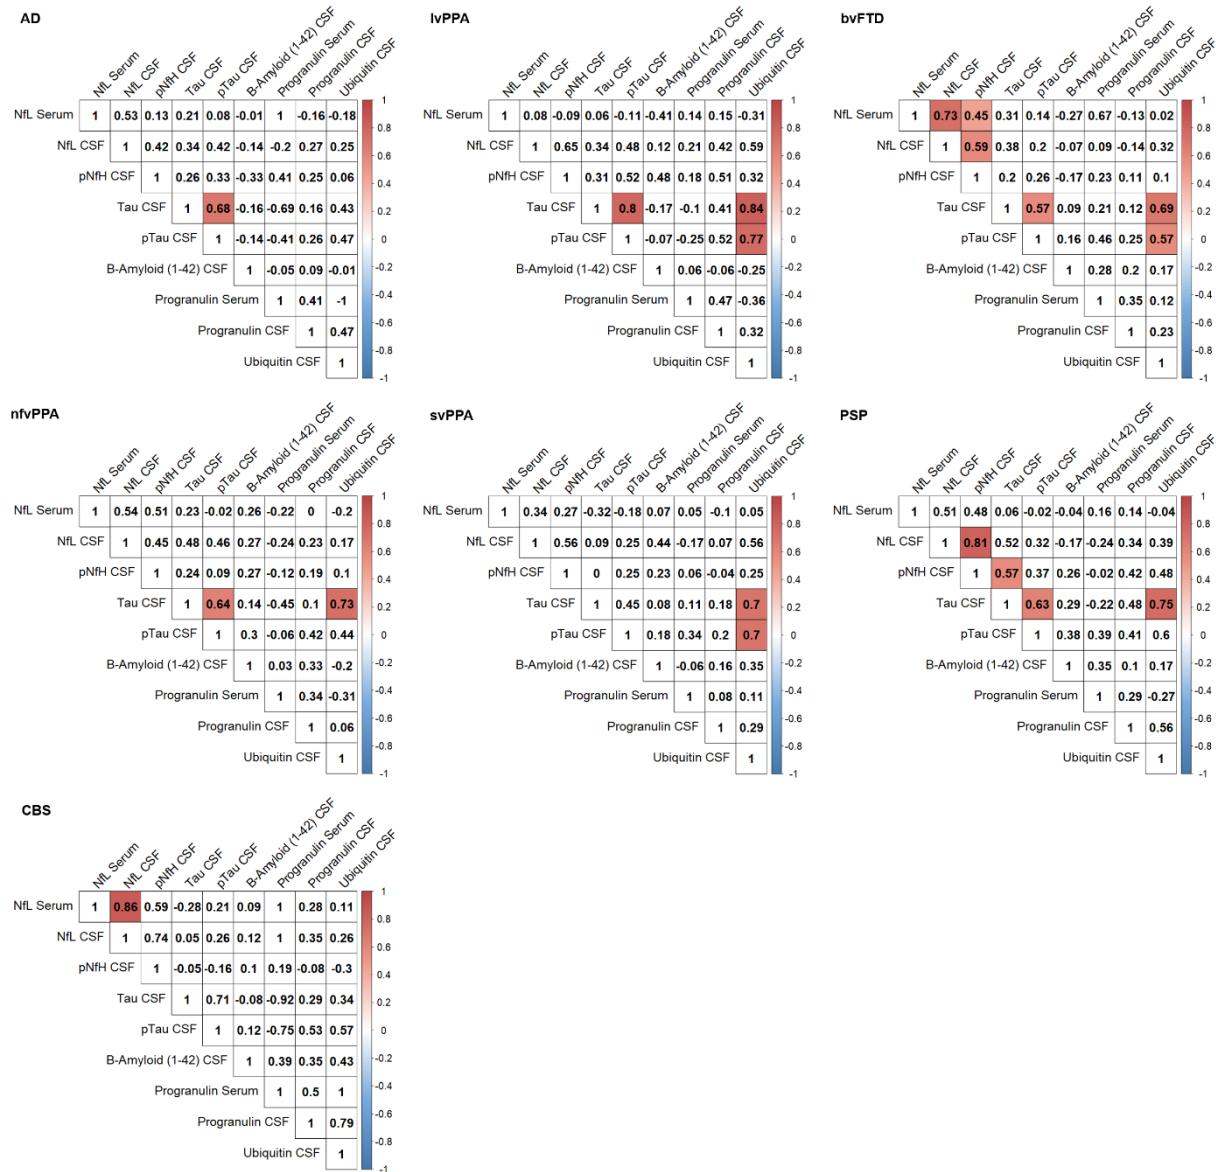

Figure S1: Partial Spearman correlations between serum and CSF biomarkers. Age corrected correlation coefficients, represented as Spearman's ρ of biomarkers for all patient cohorts, i.e., AD, lvPPA, bvFTD, nfvPPA, svPPA, PSP and CBS, separately. Colored cells show significantly correlated markers. Blue color denotes negative correlation and red positive correlation. Significance: $p<0.05$. AD Alzheimer's disease, bvFTD behavioral variant frontotemporal dementia, CBS corticobasal syndrome, CSF cerebrospinal fluid, lvPPA logopenic variant primary progressive aphasia, NfL neurofilament light chain, nfvPPA non-fluent variant primary progressive aphasia, pNfH phosphorylated neurofilament heavy chain, PSP progressive supranuclear palsy, pTau phosphorylated tau protein, svPPA semantic variant primary progressive aphasia.

Subcortical areas were taken from the Harvard-Oxford atlas for subcortical structures (Makris et al., 2006; Frazier et al., 2005; Desikan et al., 2006; Goldstein et al., 2007), whereas all other areas were extracted from the Laboratory of NeuroImaging probabilistic brain atlas (Shattuck et al., 2008). All areas are given for left and right hemisphere respectively, resulting in a total of 114 brain areas, GM: gray matter, WM: white matter. Note, that the brainstem includes midbrain, pons and medulla oblongata.

Table S18: Significant correlations between CSF/serum NfL, CSF pNfH and total brain volume, GM and WM volume for bvFTD and AD.

bvFTD volumes	correlated biomarker	N	p value	Spearman's ρ
Total brain	CSF pNfH	84	0.0234	-0.29
Total WM	CSF pNfH	84	0.0186	-0.30
Total brain	CSF NfL	66	0.0016	-0.42
Total GM	CSF NfL	66	0.0183	-0.34
Total brain	serum NfL	92	0.0002	-0.40
Total GM	serum NfL	92	0.0114	-0.30
Total WM	serum NfL	92	0.0050	-0.33
AD volumes	correlated biomarker	N	p value	Spearman's ρ
Total brain	CSF NfL	43	0.0184	-0.42
Total brain	serum NfL	37	0.0208	-0.44

Total brain volume refers to gray and white matter volumes without cerebrospinal fluid. Rho is the age corrected correlation coefficient Spearman's ρ , Significance: $p<0.05$. AD: Alzheimer's disease, bvFTD: behavioral variant frontotemporal dementia, CSF: cerebrospinal fluid, GM: gray matter, N: Number of participants included, NfL: neurofilament light chain, pNfH: phosphorylated neurofilament heavy chain, WM: white matter.
