We won't be...

Leading individuals and institutions in adopting open practices to improve research rigor

Corina Logan & Laurent Gatto

Ross Mounce, Stephen Eglen, Adrian Currie, Lauren Maggio

Early Career Researchers (ECRs) often feel pressured into taking actions **against our ethics** to pursue an academic career (e.g., publishing in particular journals)

ECRs: Sign the **petition** to help us change academic culture

Non-ECRs: Join the list of **supporters** by valuing open practices, especially when making decisions about hiring, promotion, and grants

www.BulliedIntoBadScience.org

#BulliedIntoBadScience

Conducting & evaluating research depends on the ability to:

1. **read, understand, and verify** it.

*Massive amounts of money paid to publishers
= barrier to researchers, academia, and the public*

2. have anyone **generate and disseminate** it,
regardless of wealth, access to opportunity,
perception of prestige, and evaluator implicit biases

Conducting & evaluating research depends on the ability to:

1. **read, understand, and verify** it.

*Massive amounts of money paid to publishers
= barrier to researchers, academia, and the public*

2. have anyone **generate and disseminate** it,
regardless of wealth, access to opportunity,
perception of prestige, and evaluator implicit biases

The ethical framework

- 1) **Researchers** and **publishers** have a **responsibility to the public** to provide them with **free access to publicly funded products**, which are a common good^{1,2}
- 2) **Publishers** of research products have a **responsibility to researchers** to value the generation and packaging of knowledge³
- 3) **Researchers** have a **responsibility to the public to conduct rigorous research** because it will serve as the foundation for the advancement of discoveries, it provides the best value for money, and earns public trust⁴

Conducting & evaluating research depends on the ability to:

1. **read, understand, and verify** it.

*Massive amounts of money paid to publishers
= barrier to researchers, academia, and the public*

2. have anyone **generate and disseminate** it,
regardless of wealth, access to opportunity,
perception of prestige, and evaluator implicit biases

Closed peer review = unverifiable

Closed peer review prevents verifiability of the evaluation of the research process

- Prohibits quality control
- Reviews can be inadequate, biased, subjective
- Editors = key to high standards in research and ethics

My closed peer review horror story

- I reviewed an article, raised many issues, some insurmountable

My closed peer review horror story

- I reviewed an article, raised many issues, some insurmountable
- Decision = **Major Revision**

My closed peer review horror story

- I reviewed an article, raised many issues, some insurmountable
- Decision = **Major Revision**
- Not cc'ed on further decisions, **no re-review**

My closed peer review horror story

- I reviewed an article, raised many issues, some insurmountable
- Decision = **Major Revision**
- Not cc'ed on further decisions, **no re-review**
- Asked to publish a response to accepted article. **Accepted version didn't address comments**; many factual errors

My closed peer review horror story

- I reviewed an article, raised many issues, some insurmountable
- Decision = **Major Revision**
- Not cc'ed on further decisions, **no re-review**
- Asked to publish a response to accepted article. **Accepted version didn't address comments**; many factual errors
- Executive editor + handling editor + president of society **refused to acknowledge they accepted the article without proper revision and didn't seem to care it was low quality / incorrect**

My closed peer review horror story

- I reviewed an article, raised many issues, some insurmountable
- Decision = **Major Revision**
- Not cc'ed on further decisions, **no re-review**
- Asked to publish a response to accepted article. **Accepted version didn't address comments**; many factual errors
- Executive editor + handling editor + president of society **refused to acknowledge they accepted the article without proper revision and didn't seem to care it was low quality / incorrect**
- I am mentioned in Acknowledgements

I control where I donate my reviewer/editor time

Reviewing Ethics

If I am invited to review a paper for a journal and/or publisher that is not aligned with my commitment to conducting rigorous science, I accept the review, write the below text in the Comments to the Authors section, and submit the review. I got this idea from the [Peer Reviewers' Openness Initiative](#) and modified it to suit my particular ethics.

- - -

My goal is to ethically conduct and promote rigorous science. I avoid exploiting myself as a scientist, I facilitate equality and diversity by ensuring that no one is discriminated against when reading scientific literature I contribute to, and I keep funds in academia (see my [paper](#), [presentation](#), and [website](#) for background). I use the mechanism of transparency to achieve my goal so anyone can evaluate my contributions at every step of the process.

Therefore, I am only willing to review papers that:

- 1) are going to be published gold open access under a CC-BY license,
- 2) will publish the review history alongside the paper,
- 3) are submitted to a journal where 100% of the articles are open access, and
- 4) are submitted to a journal that is published by an academic non-profit organization, or a for-profit corporation that
 - a) has low or no article processing charges, and/or
 - b) heavily invests profits in academia, and/or
 - c) are working to modernize publishing infrastructure for researchers

I am not willing to review this paper at this journal because criteria 2-4 are not met, and it is unclear whether criterion 1 is met.

Sincerely,
Corina Logan
Max Planck Institute for Evolutionary Anthropology

Peer review of preregistrations at PCI

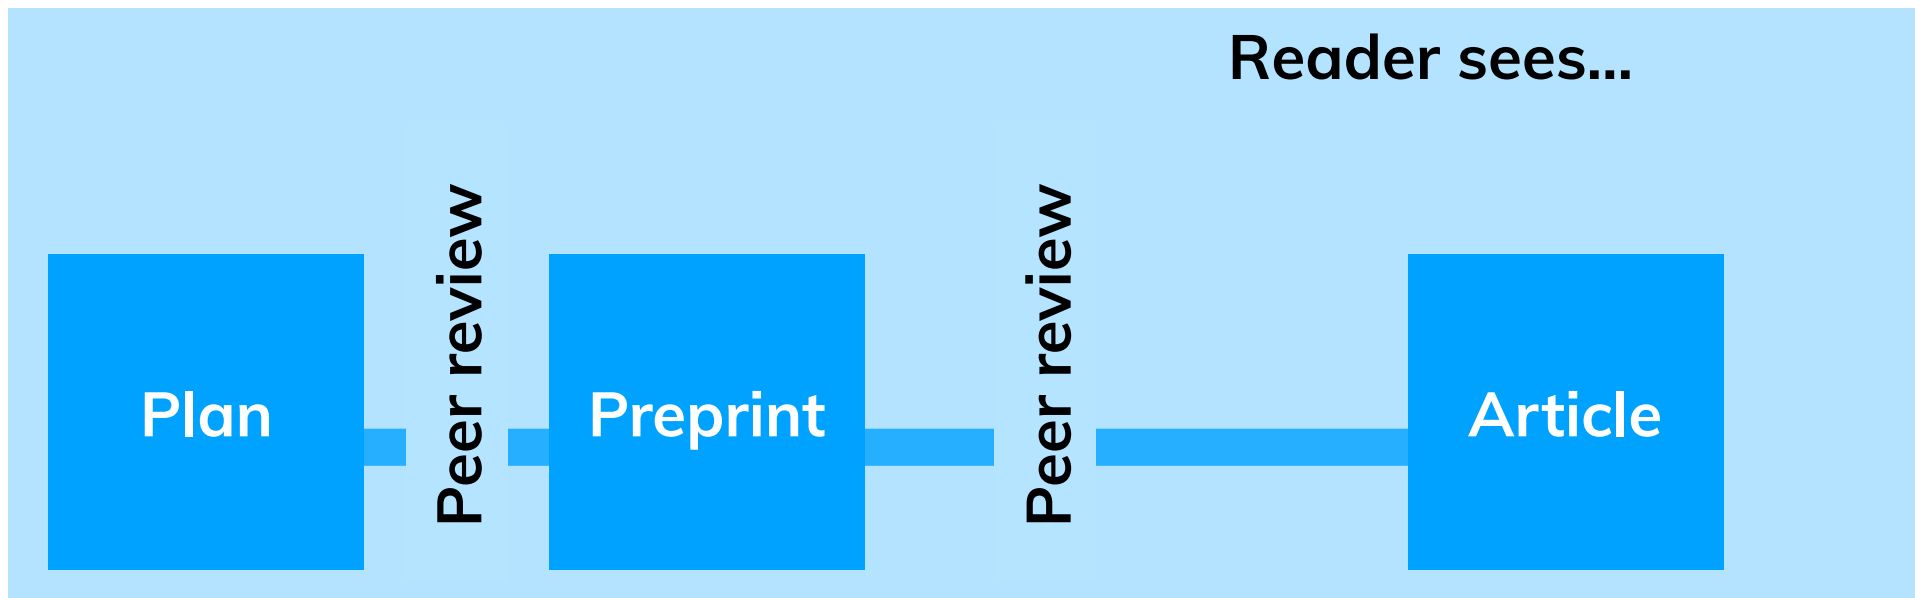

Prevents wasting resources by improving research before it begins

“Flexible registered report”

Allows verification of research process and evaluation process

Conducting & evaluating research depends on the ability to:

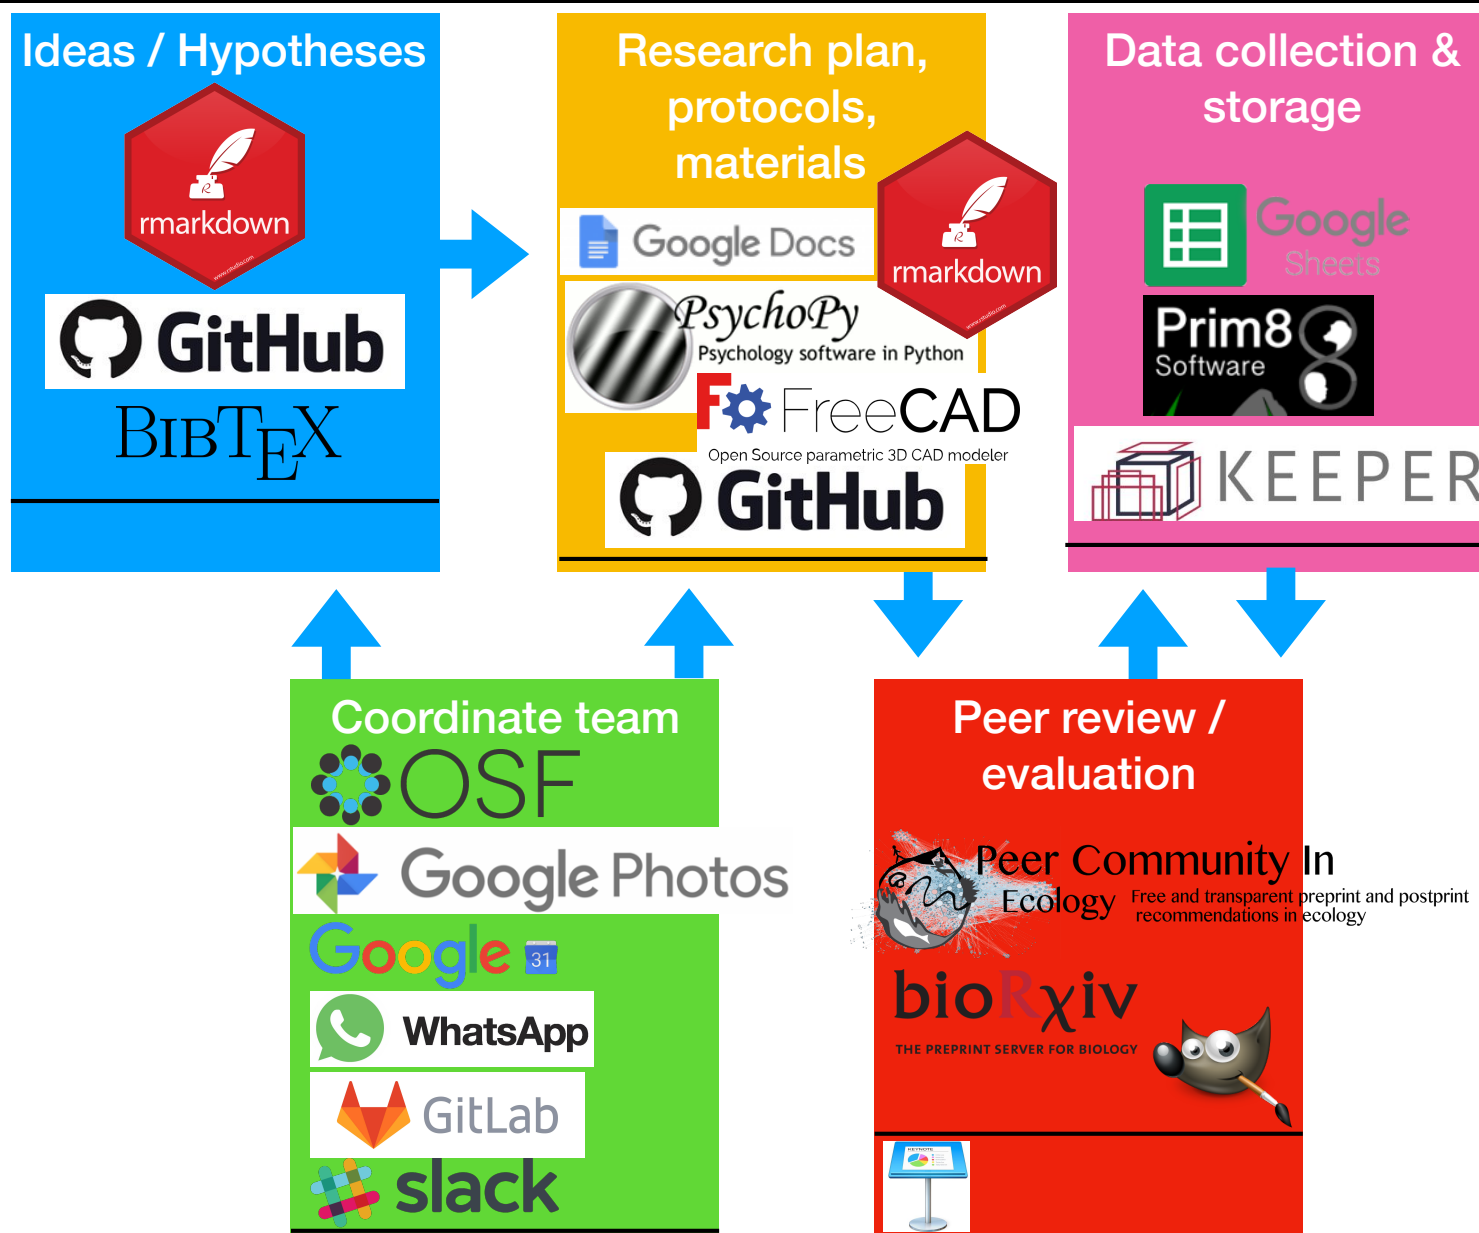

1. **read, understand, and verify** it.

*Massive amounts of money paid to publishers
= barrier to researchers, academia, and the public*

2. have anyone **generate and disseminate** it,
*regardless of wealth, access to opportunity,
perception of prestige, and evaluator implicit biases*

***Making my research readable and
verifiable = better & faster***

Making my research readable & verifiable saves time and increases its value

Above the line = open tool
Below = not open

Open = free to use
Most=free to use, all=free for public to read, some=open source

I describe what I love about my workflow at MPI Innovators blog
<https://innovatingscholcomm.mpg.de/2019/06/10/corinas-workflow/>

See GenR blog for a conversion of this work flow to all open source tools:
<https://genr.eu/wp/making-research-workflow-open-source/>

Conducting & evaluating research depends on the ability to:

1. **read, understand, and verify** it.

*Massive amounts of money paid to publishers
= barrier to researchers, academia, and the public*

2. have anyone **generate and disseminate** it,
regardless of wealth, access to opportunity,
perception of prestige, and evaluator implicit biases

Incentivizing open, evaluating ability

Barriers to knowledge generation

Only people like us can access the knowledge we generate: English-speaking academics at wealthy institutions^{1,2} = blocks progress in research & applications

Increasing diversity in research & researchers can help address this limitation³

Tackling the prestige barrier to knowledge generation

Essential requirements in **job adverts**:

- require evidence/willingness to engage in open practices
- assess research quality directly (DORA¹)
- must be good role models for groups traditionally underrepresented in STEM

...because **metrics** can be gamed and are more a **sign of privilege** than quality

Increase diversity via...

- Sign & implement DORA sfdora.org
- Open Science Massive Online Open Course <https://opensciencemooc.eu>

¹osf.io/afwre/ & jobs.zeit.de/jobs/muenchen_professur_w3_fuer_sozialpsychologie_121431.html, twitter.com/chrisdc77/status/871733428433104897

Counteracting implicit biases to evaluate ability, not privilege

Women = **less likely to be first authors** of articles in journals with high impact factors¹, thus men are more likely to have a “good” CV, but only because of implicit biases

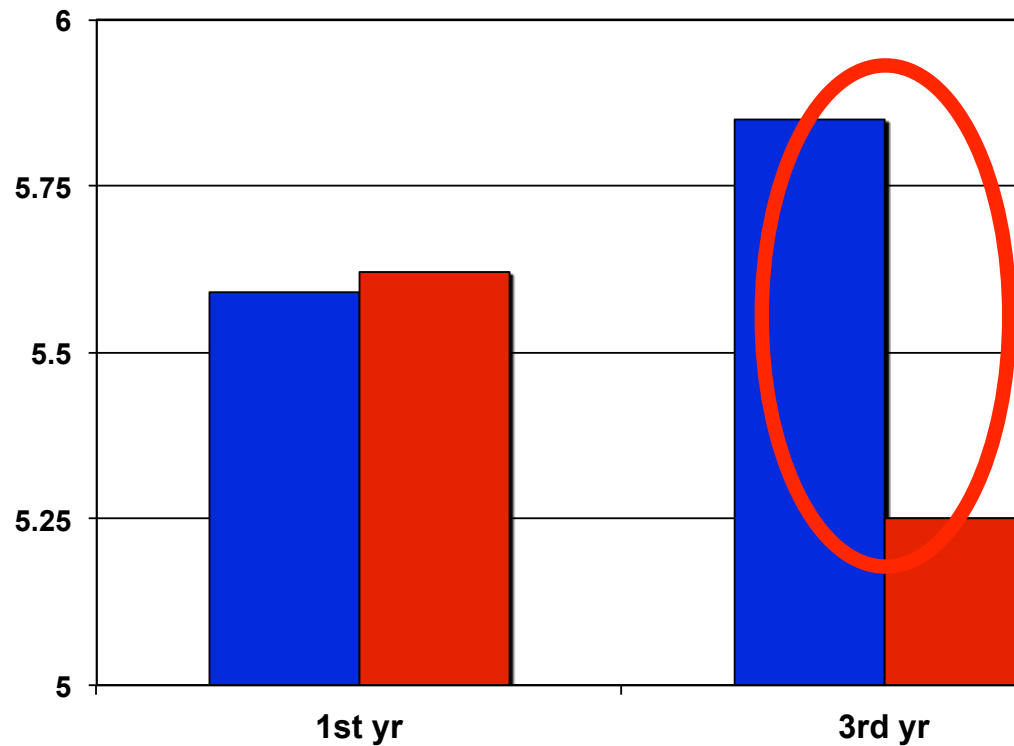

Women’s research rated **lower quality** than men’s², thus risk taking (publishing) = more costly (lower payoff)

But are women more risk averse?

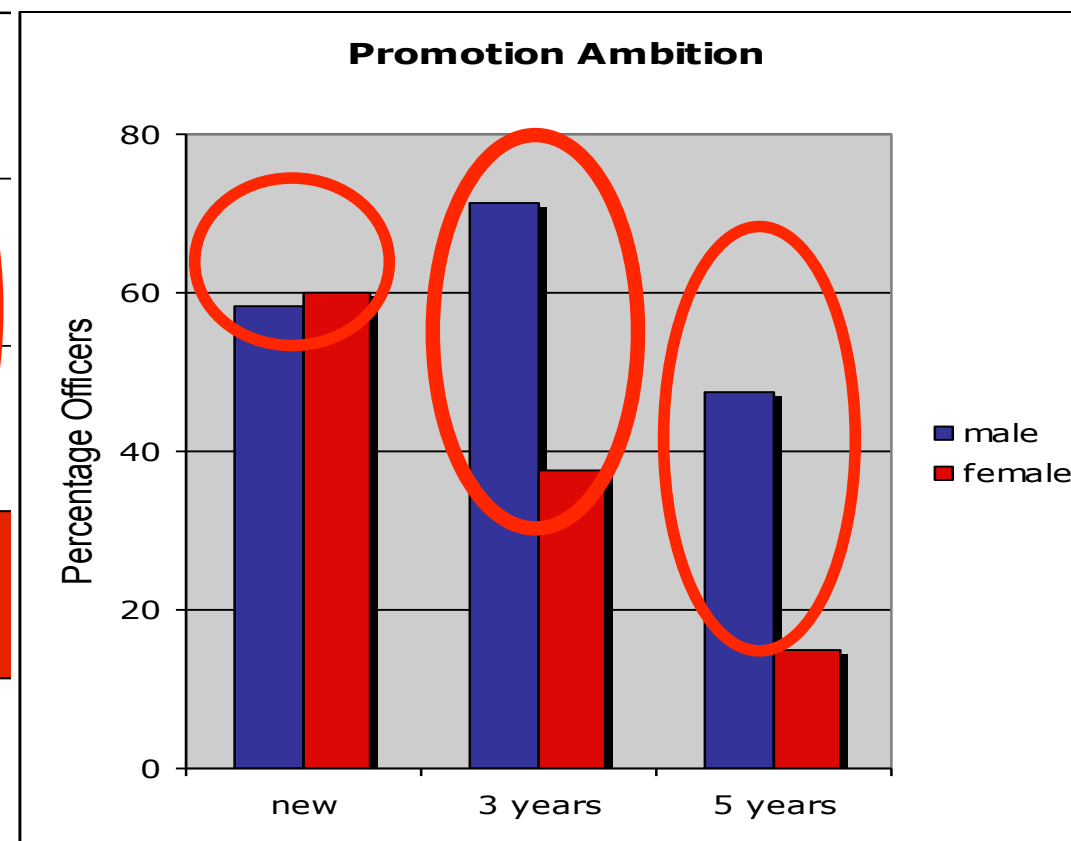

Women are **NOT** more risk averse than men

Differences in Ambition?

Surgeons

The Police service

Women are **NOT** more risk averse than men

Women are less likely to take risks

(apply, interview, do research, ask for promotion, etc.)

because they are less likely to receive a reward for such efforts

Women are **NOT** more risk averse than men

Women are less likely to take risks

(apply, interview, do research, ask for promotion, etc.)

because they are **less likely to receive a reward** for such efforts

“the underrepresentation of women at the top in terms of voluntary decisions not to pursue leadership may be a **strategic response to discrimination**” (Ryan et al. 2007 *Soc Pers Psych Compass*, p. 267)

Women are **NOT** more risk averse than men

Women are less likely to take risks

(apply, interview, do research, ask for promotion, etc.)

because they are **less likely to receive a reward** for such efforts

“the underrepresentation of women at the top in terms of voluntary decisions not to pursue leadership may be a **strategic response to discrimination**” (Ryan et al. 2007 *Soc Pers Psych Compass*, p. 267)

- Challenges at the workplace
- Balancing family and work
- Inadequate training/information

Murray Edwards College 2014

Prestige blocks knowledge generation: Tackling implicit biases

- Consider background of person behind the CV: do they have enough privilege to **access** opportunities considered “good”?
- Consider the **evidence** before judging a top woman harshly¹
- **Discover** your implicit biases
<https://implicit.harvard.edu>
- Gender language **calculator**, use “they”, avoid names
<http://gender-decoder.katmatfield.com/about>
- Call on a **woman to ask the 1st question**²
<http://diversityinacademia.strikingly.com>
- When offering an opportunity (e.g., job, seminar, etc.), **recruit** via groups that support Underrepresented Minorities in the sciences (URMs).

ALWAYS well qualified URMs - stop and think

Request a woman scientist
500womenscientists.org

¹Sandberg 2013 Lean In, ²Carter et al. 2018 PLOS ONE, twitter.com/LoganCorina/status/868491581145444352, [nature.com/news/is-science-only-for-the-rich-1.20650?WT.mc_id=FBK_NatureNews&sf81929464=1](https://www.nature.com/news/is-science-only-for-the-rich-1.20650?WT.mc_id=FBK_NatureNews&sf81929464=1)

I have argued research value increases when...

1. one can **read, understand, and verify** it.
*Massive amounts of money paid to publishers
= barrier to researchers, academia, and the public*
2. anyone is able to **generate and disseminate** it,
regardless of wealth, access to opportunity,
perception of prestige, and evaluator implicit biases

We can **stop exploiting and discriminating now** because...

- ethical open options exist
- we can address our implicit biases
