

## Supplemental Data

### Supplementary figure 1

**Electron microscopy of immunoisolated vesicles.** Electron microscopy (EM) of an enriched SV fraction (LP2) used as starting material for the immunoisolation of VGLUT-1 and VGAT specific SVs subpopulations (upper left corner). Immunoisolation of VGLUT-1 (upper right and lower left corner) and VGAT (lower right corner) specific SVs. The immunobeads bind a homogeneous organelle population with the size and shape of SVs (~ 40 nm).

### Supplementary figure 2

Flow-chart describing the procedures for preparing a starting fraction of enriched SVs (A), and for immunoisolation and comparative quantitative proteomics of proteins on VGLUT-1 and VGAT specific SVs (see Methods for details). Abbreviation: IP, Immunoprecipitation /immunoisolation.

### Supplementary figure 3

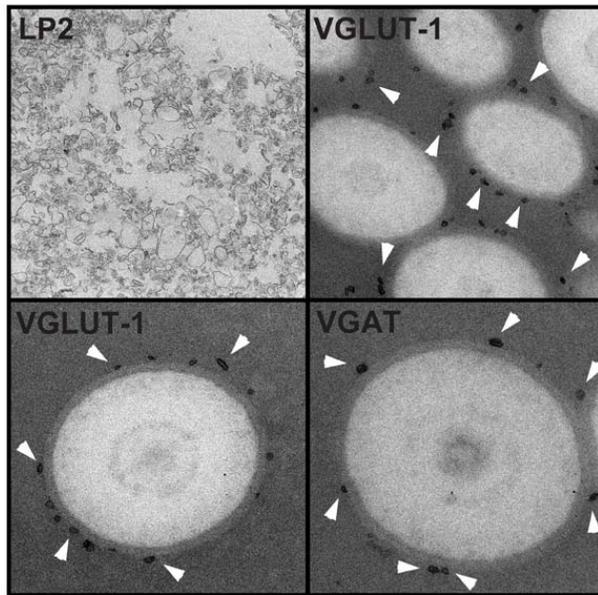

**Normalization of MS-data.** The peptide ratios (VGLUT-1/VGAT) for the three independent biological replicates were normalized to correct for systematic bias. Box plots of  $\log_2$  transformed (A) raw and (B) normalized VGLUT-1/VGAT ratios. (A) The raw VGLUT-1/VGAT peptide ratios were for all three replicates above zero indicating unequal protein amounts. (B) Normalization of the peptide ratios resulted in a balanced distribution of the ratios around zero (i.e. 1:1 ratio) for all three replicates (Rep.1- Rep.3) and for the combined protein ratios (Ave.) Normalization of the data was done by dividing the peptide ratios from each replicate by their mean ratios. The box plots represent the interquartile range (IQR) of 25-75%, the center line the median and the whiskers (horizontal lines) extend up to 1.5-fold of the IQR range. Protein ratios outside the whiskers are considered to be significantly different between VGLUT-1 and VGAT specific vesicles.

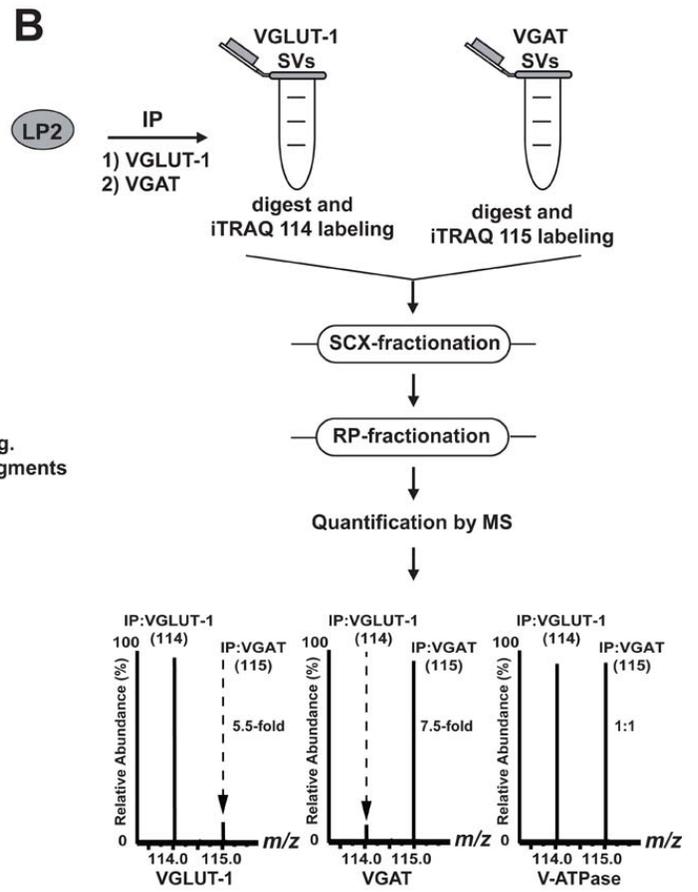

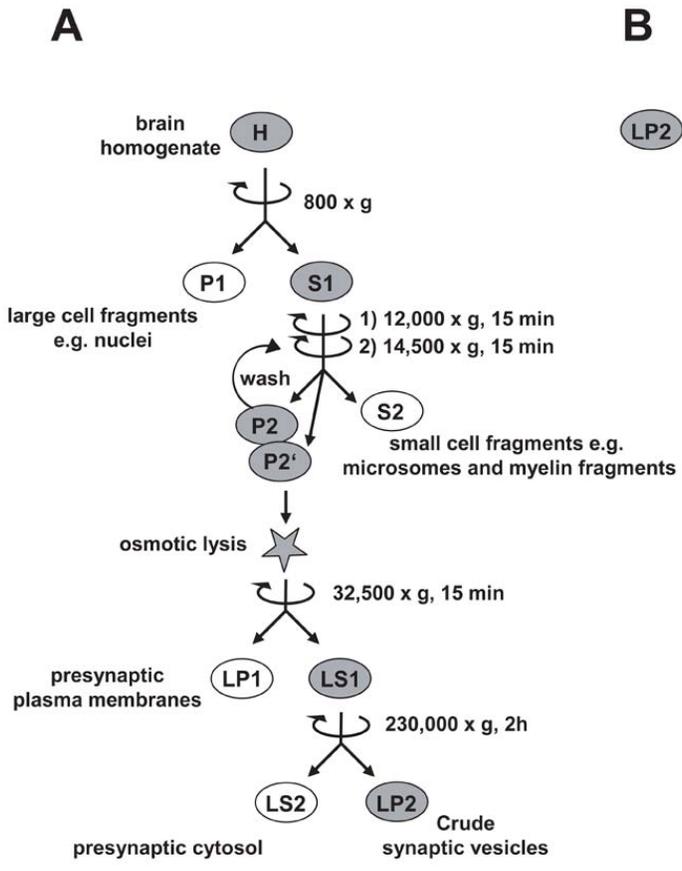

#### **Supplementary figure 4**

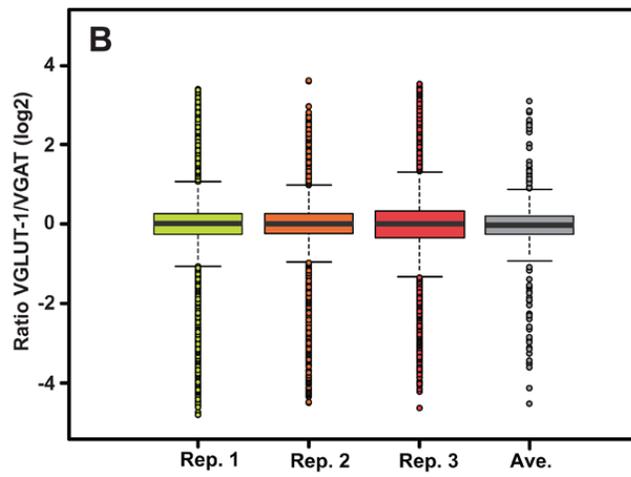

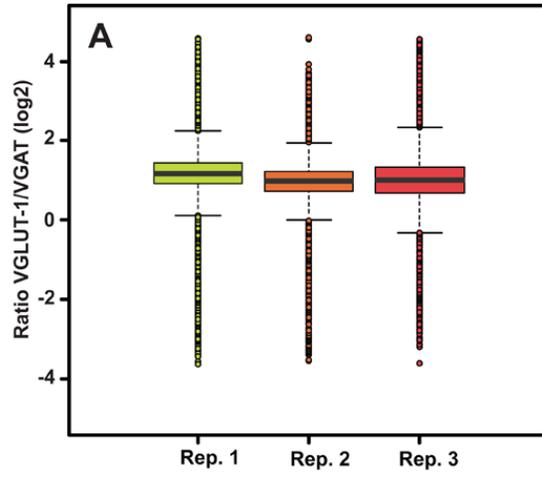

**Immunofluorescence of SV2A and SV2B and EM analysis MAL2.** (A) Fluorescence microscopic analysis of SV2A and (B) SV2B (red) with either VGLUT-1 or VGAT (green) in mouse hippocampal sections. Bar represents 100  $\mu$ m. Double immunogold labeling of the rat cerebellar cortex in a parallel fiber terminal of the molecular layer (C) and in a mossy fiber terminal of the granule cell layer (D) indicates the synaptic and vesicular coexistence of MAL2 (10 nm gold) and VGLUT-1 (5 nm gold). Inserts represent a detail showing the presumable coexistence of VGLUT-1 and MAL2 at the same vesicles. The inserts are areas from independent samples are therefore not marked in the overview.

#### **Supplementary figure 5**

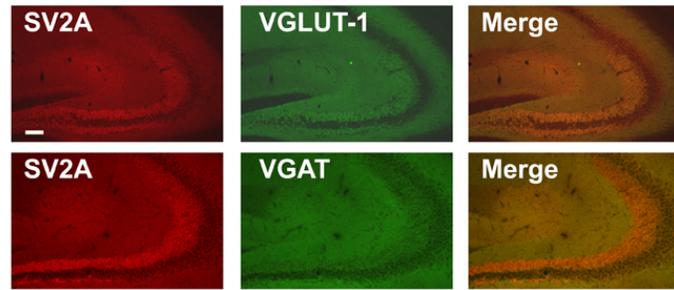

**Characterization of the rabbit antibody raised against MAL2.** The MAL2 antiserum recognizes a single major band at the expected size of 20 kDa (second lane) in an enriched fraction of SVs (LP2 fraction) which is not recognized by the pre-immune serum (first lane). Specificity of the antibody was checked by preincubating the antiserum with an excess of the peptide used for immunization (third lane, MAL2 Ab + pep1), resulting in a disappearance of the major 20 kDa band. No effect was observed when a control peptide was used instead (fourth lane, MAL2 Ab + pep2) (See Methods for more details).

**Definition and abbreviations**

---

Column D	Average protein ration from the three independent biological replicates
Column E	Standard deviation for the VGLUT-1/VGAT ratio for the three independent replicates
Column F	VGLUT-1/VGAT protein ratio (median) for biological replicate 1
Column G	VGLUT-1/VGAT protein ratio (median) for biological replicate 2
Column H	VGLUT-1/VGAT protein ratio (median) for biological replicate 3
Column I	Total number of peptides used for quantitation
Column J	Number of biological replicates the protein is identified in
Column K	Mascot search engine (v.2.2) protein hit number
Column L	Mascot search engine (v.2.2) protein score
Column N	Protein identified in Takamiri et al (Molecular anatomy of a trafficking organelle, Cell, 2006)
•	Protein quantitation done with min 3 peptides including unique peptides
□	No ratio indicated due to lack of unique peptides for quantitation
▲	No ratio indicated due to less than 3 peptides available for quantitation
IP	Imunoprecipitation/immunoisolation
S.D.	Standard deviation

**Supplemental Table 2. All proteins with significant differential expression.**
