# Publikationsliste definieren

The screenshot shows a web interface for defining publication criteria. The main content area is titled "Criteria for Publications" and features a search bar with "Citation" selected and "Text" as the operator. Below this, there are two sections: "Authors" and "Local tags".

**Authors:** A checkbox is checked. The "Values" list includes Jonathan S. Friedlaender, Jonathan Winawer, Joost Kuggeleijn, Joris Janssen, and Jos J. A. Van Berkum (selected). The "operator name" is set to "or".

**Local tags:** A checkbox is unchecked. The "Values" list includes dvandenbrink-submitted, hmitterer-submitted, jvanberkum-invited\_talk, jvanberkum-notforweb, and jvanberkum-submitted (selected). The "operator name" is set to "not".

Two red arrows point from the "Manage portlets" link in the left sidebar to the "Authors" and "Local tags" sections respectively.

**Person Profile (Jos van Berkum):** Max Planck Institute for Psycholinguistics, PO Box 310, 6500 AH Nijmegen, The Netherlands. Phone: +31-24-3521309, Fax: +31-24-3521213, Room: 341.

Anticipating upcoming words in discourse: Evidence from ERPs and reading times — MPI Websi...

http://www.mpi.nl/publications/escidoc-60092/@popup

Journal article

**Van Berkum, J. J. A., Brown, C. M., Zwitserlood, P., Kooijman, V., & Hagoort, P. (2005). Anticipating upcoming words in discourse: Evidence from ERPs and reading times. *Journal of Experimental Psychology: Learning, Memory, and Cognition*, 31(3), 443-467.**

The authors examined whether people can use their knowledge of the wider discourse rapidly enough to anticipate specific upcoming words as a sentence is unfolding. In an event-related brain potential (ERP) experiment, subjects heard Dutch stories that supported the prediction of a specific noun. To probe whether this noun was anticipated at a preceding indefinite article, stories were continued with a gender-marked adjective whose suffix mismatched the upcoming noun's syntactic gender. Prediction-inconsistent adjectives elicited a differential ERP effect, which disappeared in a no-discourse control experiment. Furthermore, in self-paced reading, prediction-inconsistent adjectives slowed readers down before the noun. These findings suggest that people can indeed predict upcoming words in fluent discourse and, moreover, that these predicted words can immediately begin to participate in incremental parsing operations.

## Age effects on the process of L2 acquisition? Evidence from the acquisition of negation and finiteness in L2 German

Authors: Dimroth, Christine  
Language: English  
Date of Publication (YYYY-MM-DD): 2008  
Title of Journal: Language Learning  
Volume: 58  
Issue / Number: 1  
Start Page: 117  
End Page: 150  
Review Status: not specified  
Audience: Experts Only  
Abstract / Description:

It is widely assumed that ultimate attainment in adult second language (L2) learners often differs quite radically from ultimate attainment in child L2 learners. This article addresses the question of whether learners at different ages also show qualitative differences in the process of L2 acquisition. Longitudinal production data from two untutored Russian beginners (ages 8 and 14) acquiring German under roughly similar conditions are compared to published results on the acquisition of German by adult immigrants. The study focuses on the acquisition of negation and finiteness as core domains of German sentence grammar. Adult learners have been shown to produce an early nonfinite learner variety in which utterance organization relies on principles of information structure rather than on target language grammar. They then go through a couple of intermediate steps in which, first, semantically empty verbs (auxiliaries) serve as isolated carriers of finiteness before lexical verbs become finite. Whereas the 14-year-old learner of this case study basically shows a developmental pattern similar to that of adults, the 8-year-old child produces a different order of acquisition: Not only is the development of finite morphology faster, but finite lexical verbs are acquired before auxiliary constructions (Perfekt). Results suggest a stronger tendency for young learners to incrementally assimilate input patterns without relying on analytic steps guided by principles of information organization to the same extent as older learners.

## Research output

### Publications

The primary outlets for our scientific research are publications (mostly books, journal articles, and book chapters). You can find various lists of them elsewhere on the site, as part of

- the **annual report section**
- **research project pages**
- **research group pages**
- **person webpages**
- our dissertation series webpage

Most of the publication lists on our website are generated from our PubMan publications database. Via "more>" at the end of a citation, you can access additional information (e.g., abstract, supplementary information, URLs for fulltext download, fulltext copy request form).

### Other contributions

Our work also contributes to science and society in many other ways, such as by

- the organization of **scientific events**

## Probleme:

- Autor war von 2002-2006 am MPI, Publikation 2008 gehoert nicht mehr zur MPI Arbeit, ABER MPI Autor ist dabei
- Doppelnennungen, Autor war bei mehreren Abteilungen

Unsere Lösung: alles OrgUnits an alle Datensätze des Autoren hängen und nach der Migration da löschen, wo nötig

# CoNE - Control of Named Entities

## About

The purpose of this service is to provide methods to deal with controlled lists of named entities to assure data quality and facilitate data access and data entry.

ins

**\*Creator role** Author

**\*Type**  Person  Organization

**\*Family name** asif **\*Given name**

Organization name and address

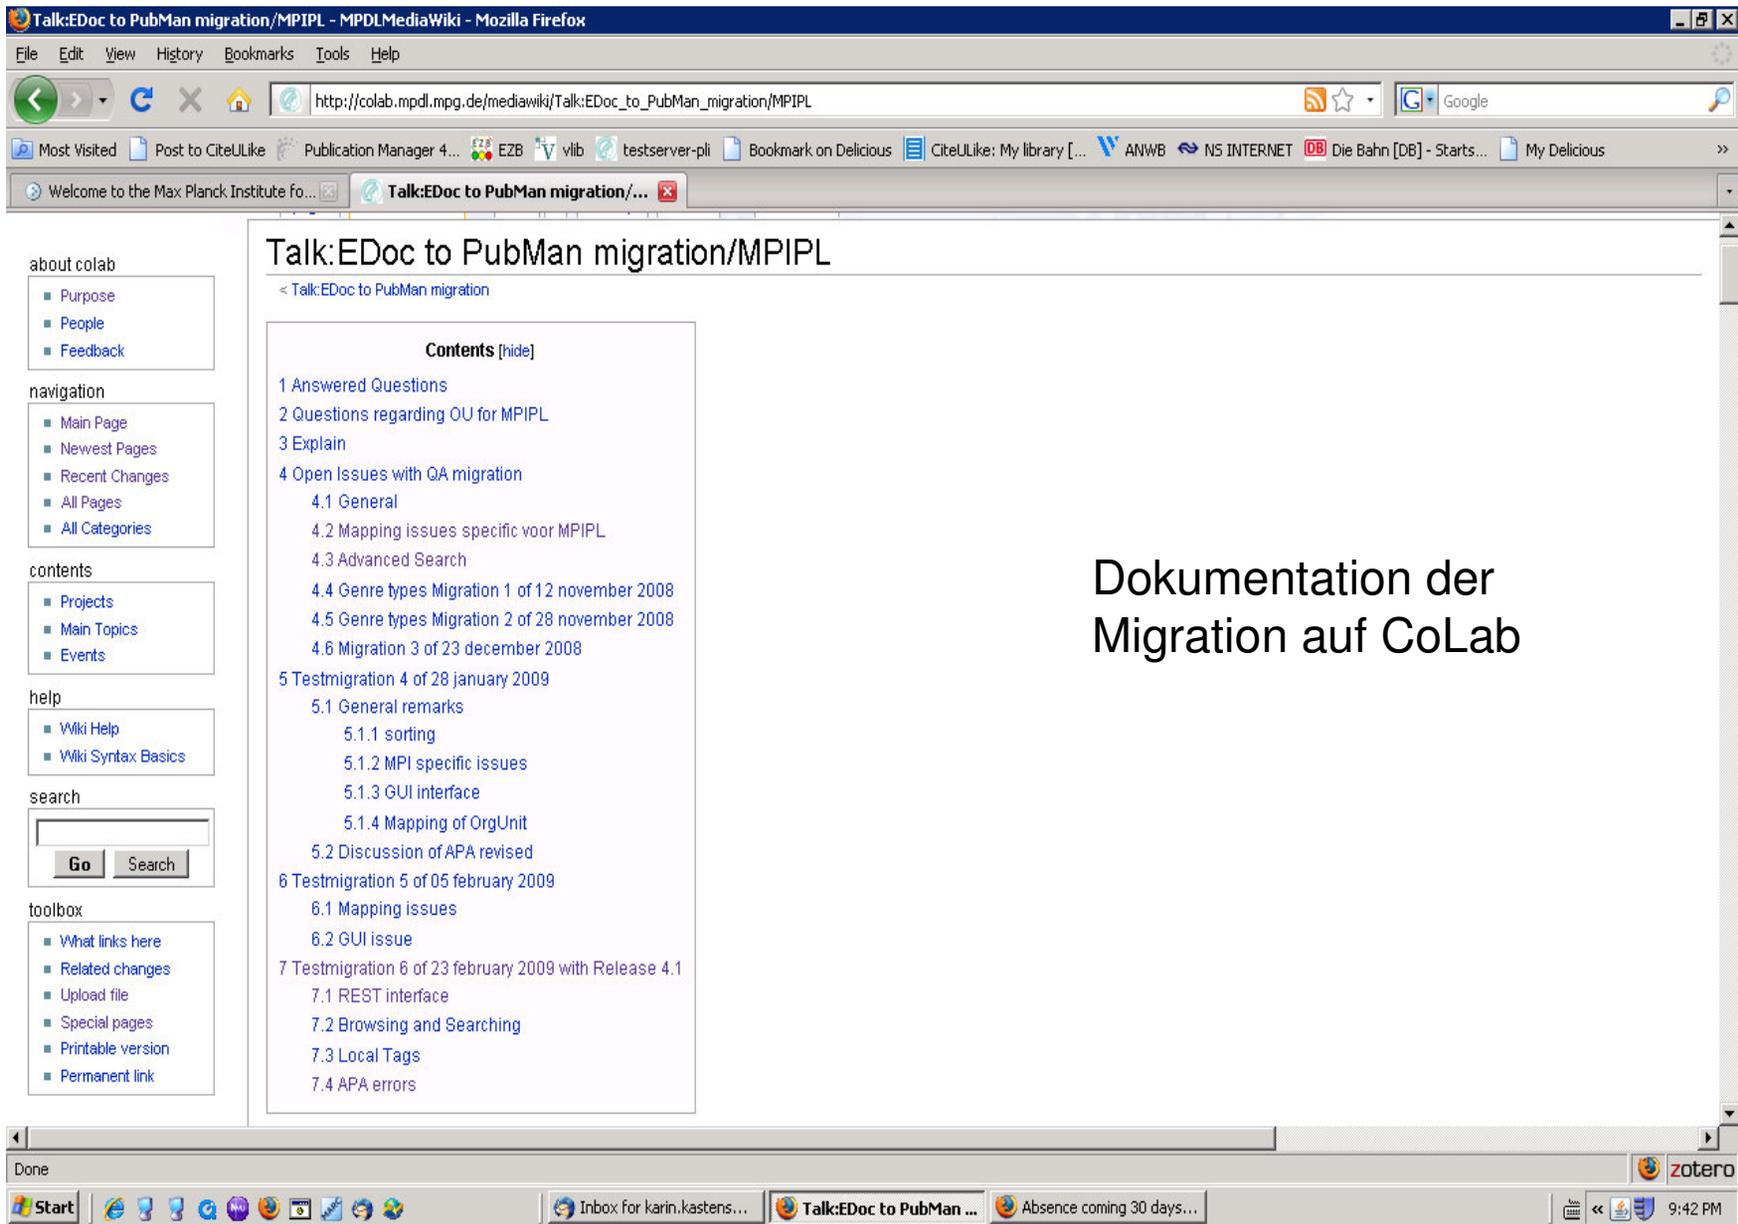

Researcher name + his group in the institute are offered by CoNE service

# Migration MPI PL

- Metadata mapping (bibliographische Daten)
  - Organizational Units auf PubMan anlegen
  - Mapping eDoc Autoren auf Org Units
  - Mapping eDoc collections auf PubMan Org Units
  - Citationstyle APA Style
  - REST interface export
  - Import -> Webseite
- ... während gleichzeitig:
- Website im Aufbau
  - PubMan im Aufbau
  - Institut (2008): 4 neue Nachwuchsgruppen, 1 MaxPlanck Fellow, 1 neue Abteilung bewilligt

# Zeitverlauf Migration

- 1. Migration 12. November (Index war nicht ok)
- 2. Migration 28. November (xml war geändert, Auswirkungen auf export auf webseite, Anzahl Datensätze zu hoch...)
- 3. Migration 23.12. Release 4.0, Export/Rest interface ging nicht... Namen zum ersten Mal migriert
- 4. Migration 28. Januar, Metadata ok -> Konzentrieren auf Namen und APA Style
- 5. Migration 23. Februar, R 4.1 , local tags, Website script muss angepasst werden...
- 20.3. PubMan 4.1 auf Live server
- 27.3. Migration auf Live Server erfolgreich

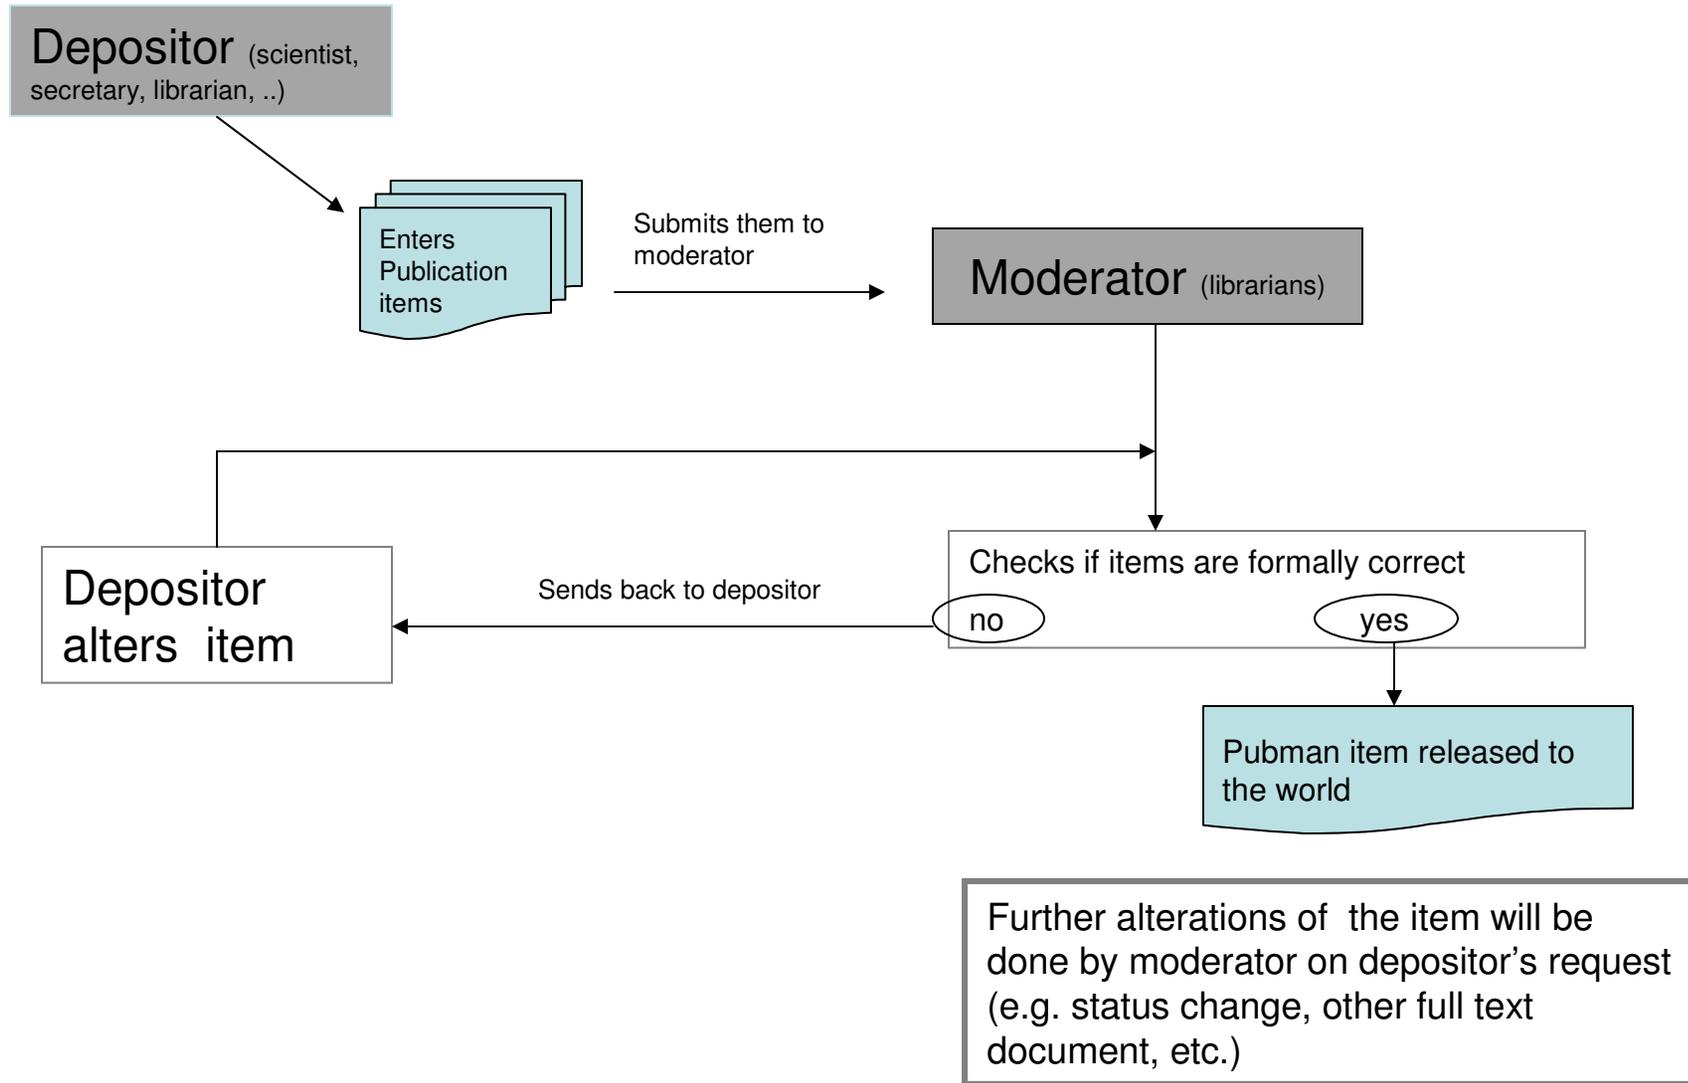

PubMan BT 2009

# Arbeiten mit PubMan

- Vorbereitungen für den Produktionsanfang
  - User anlegen
  - Welcher PubMan workflow? Standard workflow mit moderators
  - Testschulung mit den Direktionssekretärinnen
  - 31.3.2009 -> PubMan Schulung für User am Institut
    - Workflow, Submission, Website
    - OA Information (Anja Lengenfelder)
    - Gut besucht (ca. 24 Teilnehmer, u.a. Ulla Tschida, Anja Lengenfelder)
  - Ab 1.4. Verteilen der PubMan user logins

# Workflow of items in PubMan at MPI Psycholinguistics

# My items – view of depositor

The screenshot displays the 'My Items' page in the eSciDoc.PubMan system. At the top left is the logo for 'eSciDoc.PubMan PROJECT'. To the right is a search bar with a 'Go' button and a checkbox for 'Include files'. Below the search bar are navigation tabs: 'HOME', 'MY ITEMS', 'SUBMISSION', and 'BASKET (0)'. Under 'MY ITEMS', there are links for 'VIEW', 'FILTER', 'SORTING', 'EXPORT', and 'ADD SELECTED TO BASKET'. A dropdown menu for 'State' is set to 'All (except withdrawn)', and it indicates '3 Items (descending sorted by Modification Date)'. There is a '25' items per page selector and pagination controls for 'Previous' and 'Next'. On the right side, there is a breadcrumb 'Home / My Items' and the heading 'My Items'. Below this, there is a 'Go to page' field showing '1' of 1.

State	Medium View (all Items)
<input type="checkbox"/>	<b>The role of language in mind</b>
In Rework	<input type="checkbox"/> More
	Creator(s) Levinson, Stephen C.; Majid, Asifa
	Date(s) Accepted: 2009
	Genre Book Chapter
	File(s) -
	Locator(s) -

User am Institut ist 'nur' depositor, sieht die items, die er SELBER (dh unter seinem Namen) eingegeben hat!

z.Zt. Kann er sie nur im pending status bearbeiten,

In R5 kann er auch releasede items bearbeiten

# Arbeiten mit PubMan

Zweiter Context:

- Non MPI Publications by MPI PL staff
  - Mitarbeiter wollen ALLE Publikationen auf ihrer Homepage
- Diskussion für die Zukunft: wollen wir Publikationen von Wissenschaftlern, die an mehreren MPIs arbeiten NUR einmal in PubMan anlegen?

The screenshot shows the 'Choose Collection' page in the PubMan system. At the top, there is a search bar with a 'Go' button and a checkbox for 'Include files'. Below the search bar, there are navigation links: 'HOME', 'MY ITEMS', 'QA WORKSPACE', 'SUBMISSION', and 'BASKET (0)'. The main heading is 'Choose Collection'. Below this, there are two collection options:

- Non MPI publications by MPI Psycholinguistics staff**  
Description: Non MPI Publications by MPI PL staff.
- Publications of the MPI for Psycholinguistics**  
Description: (empty field)

At the bottom left, there is a 'Back' button.

- Moderatoren müssen 'privileged user' sein in beiden Contexten
- Information im Intranet des Instituts zur Verfügung stellen

## Feedback von Wissenschaftlern

- Wunsch nach Möglichkeiten zur Kommunikation mit Moderatoren
- Mehrere Org Units anlegen ist mühsam
- → ansonsten: kaum/kein feedback zum Gui/Eingabe
  - Gutes Interface? 
  - PubMan ist ein Tool kein Selbstzweck, da muss man sich einfach durchbeissen?
  - Man sagt negatives nicht der Bibliothek?
  - Es sind die Hilfskräfte die eingeben?

# QA workspace

<input type="checkbox"/>	<b>Syntactically-based compensation for phonological reduction without top-down fe...</b>
Released	<input type="checkbox"/> More
	Creator(s) Tuinman, Annelie; Mitterer, Holger; Cutler, Anne
	Date(s) Submitted: 2009
	Genre Journal Article
	File(s) -
	Locator(s) -

Anzahl neu eingegebener items MPI PL (Stand 5.5.2009)

MPI Publikationen: 270 (released 211, submitted 54, 5 in rework)

Non-MPI : 82 (released 69, submitted 9)

# Arbeiten als Moderator mit dem QA Workspace

## Navigieren im Workspace schwierig

- Keine gezielte Suche möglich
- Sortieren nach Autoren nicht möglich
- Alle (!) status item bleiben im gleichen Workspace
- Kein comment Feld (Angaben warum noch nicht released)
- Arbeit mit 3 Moderatoren, viel off-line Absprachen nötig, die aber erst jetzt im praktischen deutlich werden

## Warum werden items nicht released?

- Auf Wunsch von Wissenschaftler, z.B. Publikation ist nur submitted, warten bis accepted ist
- Wunsch erst releasen, wenn alle Publikationen komplett in PubMan sind
- zZt werden die Metadaten von items mit image pdfs nicht indexiert -> item nicht suchbar

# Early adopter / erster Anwender

- Bugs.... Known bugs (wann werden bug knows bugs..)

solved issues:

- Performance Probleme GANZ am Anfang
- Probleme mit CoNE Service hatten Auswirkungen auf Anzeige des gesamten GUIs
- Time-out beim Upload von Full texts... Zeit zwischen upload und save durfte nur 20 Minuten sein,sonst Error und ALLES weg..
- Keine Warnung wenn mehr >1 Person Datensatz bearbeitet

-----

open issues:

- Advanced search nach creator role (also, Name=author) noch immer nicht möglich
- APA style kleine bugs, aber auch nicht möglich, um submitted journal articles OHNE source einzugeben
- Cache des Browsers macht manchmal Probleme
- Image pdfs werden nicht indiziert (ok!), aber die Metatdaten des Datensatzes dann auch nicht

# Eingabe: Bibliothek oder Wissenschaftler?

Was will man mit PubMan?

- ‘nur’ MPG Jahrbuch, d.h. publizierte Daten eines Jahres (ohne Volltexte) -> dann ‘reicht’ zentrale Eingabe im Institut durch Bibliothek

ABER, wenn man die Daten

- Schnell auf die Webseiten haben möchte
- früher im Publikationsprozess abbilden möchte z.B. für Webseiten, sowie interne und externe Listen
- zusätzlich Volltexte speichern möchte (preprints, postprints, publishers pdfs)

→ dann KANN eigentlich nur der Wissenschaftler ‘selber’ eingeben, da nur er weiss;

- welchem Projekt/Abteilung eine Publikation zugeschrieben werden soll

- visibility des Volltextes (ER hat den preprint)

- visibility der Metadata (releasen ja/nein)

# Eingabe: Bibliothek oder Wissenschaftler

MPI Nijmegen:

- Präferenz: Wissenschaftler gibt ein (kann auch Hilfskraft oder Sekretärin sein)
- Bibliothek gibt für ihn ein, ABER unter seinen Namen, so dass er später selber weitermachen kann
- zum Schluss wird doch die Bibliothek es eingeben müssen (Jahrbuch, Deposit Request?)

## PubMan: Bedeutung für die Arbeit in der Bibliothek

- PubMan hat sehr viel mit (der) Organisation (des Instituts) zu tun
- Noch nie so viel Kontakt mit Wissenschaftlern über ihre Publikationen gehabt
- Arbeit der Bibliothek sofort sichtbar auf Webseiten von Personen, Projekten..
  - Schnellheit, Korrektheit... viel intensiver
- Chance für die Bibliothek, um zentraler sichtbar zu sein

## Fazit

- MPI Nijmegen : PubMan – Early Adopter – Webpage → grosses Projekt, sehr zeitintensiv, viele Beteiligte
- Dank an MPDL: an Support, Development, Programmierer... alle sind schnell, kompetent, helfen, denken mit bei Problemen, .....
- Dank an Mitarbeiter am MPI (Wissenschaftler, Bibliotheksmitarbeiter, techn. Gruppe)
- <http://www.mpi.nl/colophon-mpi>

# Danke

- Danke!
