## Erratum

# Erratum to: “Operator product expansion of the lowest weight CPOs in $\mathcal{N} = 4$ SYM<sub>4</sub> at strong coupling” [Nucl. Phys. B 586 (2000) 547–588] <sup>☆</sup>

G. Arutyunov, S. Frolov, A.C. Petkou

In perturbation theory the free-field current  $O_{\mu}^{\mathcal{J}15}$  of dimension 5 in the irrep **15** of  $SO(6)$  splits into several operators, a descendent of the singlet operator  $O_1$  is among them. At strong coupling it is the only operator in the split that receives anomalous dimension which is therefore  $-16/N^2$ .
