### Abstract

A recent paper (Ajith *et al* 2012 *Class. Quantum Grav.* **29** 124001) described a catalog of 56 hybrid post-Newtonian/numerical-relativity waveforms modeling the inspiral, merger and ringdown of binary black hole systems spanning a range of mass ratios and spins. This catalog has been created and validated for use in the NINJA-2 project to study the sensitivity of gravitational-wave search and parameter-estimation algorithms. The contents of this catalog are being made available for public use. This addendum describes the public release.

PACS numbers: 04.25.Nx, 95.55.Ym, 04.80.Nn, 07.60.Ly, 04.25.D, 04.70.—s

 Online supplementary data available from [stacks.iop.org/CQG/30/199401/mmedia](http://stacks.iop.org/CQG/30/199401/mmedia)

The waveforms included in the supplementary data are released as part of the NINJA-2 project [1]. They may be freely used for any purpose but not redistributed. Please cite any usage as [3]. The catalog is divided into directories by submitting group, and each submission is described by a .bbh file, the format of which is described in [2]. This release includes only the  $(\ell, m) = (2, 2)$  modes, corresponding to the set validated in the paper.
