Khoisan Languages and Linguistics

Proceedings of the 4th International Symposium
July 11-13, 2011, Riezlern/Kleinwalsertal

Anne-Maria Fehn (ed.)

With the assistance of
Falko Berthold

RÜDIGER KÖPPE VERLAG
KÖLN 2017
This series is primarily concerned with the publication of source material on the language, history and culture of the Khoisan speaking population of Africa. It furthermore provides a forum for the presentation and discussion of analytical linguistic studies. The series will appear at irregular intervals and comprises both monographs and collections of papers. Contributions should be addressed to:

Rainer Voßen, Institut für Afrikanistik
Bockenheimer Landstrasse 133
Sozialzentrum Neue Mensa (S. OG)
Campus Bockenheim
Hauspostfach 144
60325 Frankfurt am Main
Germany

The contributions to this volume have been double peer reviewed.

Bibliographic information published by the Deutsche Nationalbibliothek

Table of Contents

Preface 7
Edward D. ELDERKIN
The flora and fauna of proto Khoe 9
Christoph WIRSCHING
Indefiniteness in Khoekhoegowab 49
Christian J. RAPOLD
Tone in Tsumeb and Grootfontein Khoekhoe 71
Andy CHEBANNE & Chris COLLINS
Tense and aspect in Kua: A preliminary assessment 91
Hirosi NAKAGAWA
†Haba lexical tonology 109
Anne-Maria FEHN
Marking direct objects in Ts'ixa (Kalahari Khoe) 121
Falko BERTHOLD & Linda GERLACH
Serial verb constructions in N!aqriaxe 157
Bonny SANDS, Andy CHEBANNE & Sheena SHAH
Hunting terminology in ‡Hoan 185
Gertrud BODEN
Variation and change in Taa kinship terminologies 213
Wilhelm J. G. MÖHLIG
Traces of Central Khoisan in a Bantu text of the Middle Kavango: The Tjaube Chronicle 245
Bernhard KÖHLER
Typological peculiarities in Khoisan and Omotic languages:
A comparison 267
Preface

Anne-Maria Fehn

This volume presents a collection of papers which arose from talks given at the 4th International Symposium of Khoisan Languages and Linguistics, July 11-13, 2011, in Riezlern/Kleinwalsertal. Individual articles cover data from both well-described and lesser known varieties of the Khoekwadi, Kx'a and Tuu language families, ranging from Cultural Anthropology to Historical Linguistics and Comparative Typology.

The first part is devoted to the Khoekwadi language family, starting with Elderkin's exploration of the flora and fauna known to speakers of Proto-Khoe as deductible from reconstructions based on available data. The papers by Wirsching and Rapold both deal with the family's Khoekhoe branch: Wirsching discusses indefiniteness as illustrated by a piece of modern Khoekhoe literature, while Rapold analyses tone in the varieties spoken at Tsumeb and Grootfontein. The volume further features data from three under-documented Kalahari Khoekhoe languages: First, Chebanne and Collins provide an overview of tense and aspect marking in "Kua", a language probably forming part of the Gigi-Ghana cluster; Nakagawa presents evidence from a Habo tonology which suggests a closer link with Naro; finally, Fehn discusses the pragmatic implications of direct object marking in Ts'ixa, a little known language of the Okavango Delta with affinities to both the Khwe and Shua dialect clusters.

The second part focuses on the Non-Khoe languages and includes two papers on the Kx'a family's K'Amkos subgroup: Berthold and Gerlach discuss Serial Verb Constructions in the Nlaqriake dialect, and Sands, Chebanne and Shah deal with hunting terminology, including gesture use, in Khoan. The Tuu family's Taa branch is the subject of Boden's paper, who discusses variation in kinship terminology.

In the concluding section, two papers treat contact phenomena and typological characteristics linking the southern African "Khoisan" languages to the broader spectrum of African linguistic diversity: Möhlig investigates traces of Khoek influence on a Bantu text from the Kavango area,
while Köhler compares typological peculiarities of "Khoisan" and Omotic languages.

On a final note, the editors would like to extend their thanks to the organizers of the symposium, Rainer Voßen and Bernd Heine, to the referees generously providing comments on preliminary versions of the papers assembled in this volume, and to all the authors contributing their research.

The flora and fauna of proto Khoe
Edward D. Elderkin

Introduction
As more tonally reliable data becomes available for the Khoisan languages, the nearer draws the time when a full monograph on Khoisan plant and animal terminology is possible. That time has not yet arrived. This paper is an interim and restricted essay, confining itself to items which can be reconstructed for proto Khoi (pKhoi, formerly known as proto Central Khoisan), items which have been reconstructed for pKhoi, and items which are well distributed in the data but which are not susceptible of a reconstruction in pKhoi. These last are included because although casual inspection might suggest that a reconstruction should be forthcoming, detailed consideration denies this. To qualify for pKhoi status, good attestations and reconstructions must be available for Cape and for Kalahari. As two of the sets of Kalahari data are in the southwest and geographically close to Cape, to avoid areal skewing a Khoi attestation is needed. Therefore, in effect, comparative series presented here should have an attestation in SNK (Standard Namibian Khoekhoegowab) and in Khwe.

Where a language group moves and spreads over different terrains and in different directions, it is possible to use linguistic data to seek its original homeland, but all the present day Khoi languages are found in one well delimited corner of Africa. If they are not indigenous to this area, linguists can suggest that things for which well attested starred forms can be given stand a good chance of also being present in the area of origin. This can be misleading: faultless starred forms may be made from early borrowings which postdate the period of a homeland, but predate the period of divergence from the proto language.

The assumption that where borrowing is found, this is an indication of the absence of the referent from the pKhoi environment, can never be made. But if it could be shown that all species which are endemic to a
