Announcement

Publications on Tropical Entomology

On the occasion of the 3rd annual meeting of the “Deutsche Gesellschaft für Tropenökologie” in Frankfurt a.M., conversations of editors of different journals with authors led to the statement that actually there is too little printing space offered for publications of research results on tropical insects. The journal for General and Applied Entomology ENTOMOLOGIA GENERALIS intends therefore from volume XVI on to establish beside the 5 hitherto existing fields of publication “(a) Applied Entomology, (b) Chemical Entomology, (c) Developmental Entomology, (d) Environmental and Evolutionary Entomology, (e) Structural Entomology” another 6th section, namely Tropical Entomology. All contributions dealing with this so far neglected entomological branch submitted in 1990, shall appear in springtime 1991 summarized in a special issue. All Entomologists, who are interested in the realization of this possibility of publication, or who themselves work on special problems of tropical or subtropical insects, are invited to get in contact with the editorial staff of this journal and to submit contributions as well as suggestions on the arrangement.

Professor Dr. A. Wilhelm Steffan

Editor - in - Chief

Entomologia Generalis
Journal of General and Applied Entomology
