Unfortunately, in the aforementioned contribution, we listed incorrect albedo values for bare and snow-covered sea ice at 0°C. The correct values that have been used in the model simulations are 0.55 for bare sea ice (instead of 0.5), and 0.65 for snow-covered sea ice (instead of 0.6). Please note that the sea-ice albedo values for temperatures at or below -1°C , as well as the albedo values for snow on land, are given correctly in the aforementioned contribution.
